

LWoC

- **Review Recommender, dictionaries, files**
 - How to create recommendations in order? food.txt
 - Toward a Duke eatery-recommender system, tools?
- **Test2, reworked, grades, more**
 - The good news, the regular news, the fiscal cliff, ...
- **Limits of Computation**
 - Can you do anything with enough knowledge and time?
 - Why?

CompSci 101, Fall 2012

20.1

What is Computing? Informatics?

- **What is computer science, what is its potential?**
 - What can we do with computers in our lives?
 - What can we do with computing for society?
 - Will networks transform thinking/knowing/doing?
 - Society affecting and affected by computing?
 - Changes in science: biology, physics, chemistry, ...
 - Changes in humanity: access, revolution (?), ...
- **Privileges and opportunities available if you know code**
 - Writing and reading code, understanding algorithms
 - Majestic, magical, mathematical, mysterious, ...

CompSci 101, Fall 2012

20.2

What can be programmed?

- **What class of problems can be solved?**
 - Hadoop, Cloud, Mac, Windows8, Android, ...
 - Alan Turing contributions
 - Halting problem, Church-Turing thesis
- **What class of problems can be solved efficiently?**
 - Problems with no practical solution
 - What does practical mean?
 - We can't find a practical solution
 - Solving one solves them all
 - Would you rather be rich or famous?

CompSci 101, Fall 2012

20.3

Schedule students, minimize conflicts

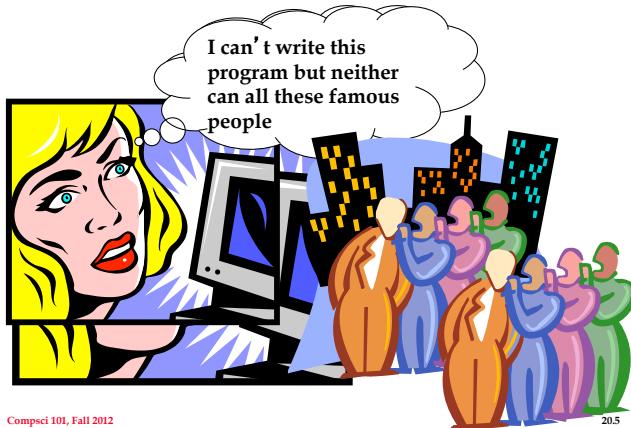

- **Given student requests, available teachers**
 - write a program that schedules classes
 - Minimize conflicts
- **Add a GUI too**
 - Web interface
 - ...
 - ...

CompSci 101, Fall 2012

20.4

Still another scenario, is this better?

CompSci 101, Fall 2012

20.5

Summary of Problem Categories

- Some problems can be solved 'efficiently'
 - Run large versions fast on modern computers
 - What is 'efficient'? It depends
- Some problems cannot be solved by computer.
 - Provable! We can't wait for smarter algorithms
- Some problems have no efficient solution
 - Provably exponential 2^n so for "small" n ...
- Some have no known efficient solution, but ...
 - If one does they all do!

CompSci 101, Fall 2012

20.6

Entscheidungsproblem

- What can we program?
 - What kind of computer?
- What can't we program?
 - Can't we try harder?
- Can we write a program that will determine if any program P will halt when run on input S ?
 - Input to halt: P and S
 - Output: yes/no halts

CompSci 101, Fall 2012

20.7

Good sites: <http://del.icio.us/>

- What is social bookmarking?
 - Why is del.icio.us interesting?
 - Who posts, who visits?
- What about a website of interesting websites?
 - What would you expect to find there?
 - Would the site list itself?
- What about sites that list/link to themselves?
 - What about a site with all sites that list themselves?

CompSci 101, Fall 2012

20.8

Bad sites: <http://haz.ardo.us>

- Site of all sites that don't list them?
 - Who lists them?
 - Who lists who lists them?
 - Who lists who lists who lists them?
- Who lists themselves?
 - Who lists who lists themselves?
- Website of all the sites that don't list themselves?
 - Is notlisted.com listed on notlisted.com?

CompSci 101, Fall 2012

20.9

halting module/problem: writing `doesHalt`

```
"""  
function doesHalt returns True if programe  
halts when run on input, and False if programe  
doesn't halt (infinite loop)  
"""  
def doesHalt(programe,input):  
    #code here  
  
    name = "SpreadingNews.py"  
    data = "input.txt"  
    if doesHalt(name,data): print "program ended!"
```

- We're assuming `doesHalt` exists – how to use it?
 - It works for any program and any data! Not just one, that's important in this context

CompSci 101, Fall 2012

20.10

How to tell if X stops/halts on Y

```
import halting  
def runHalt():  
    prog = "SpreadingNews.py";  
    input = ["abc", "def", "hij"]  
    if halting.doesHalt(prog,input):  
        print prog,"stops"  
    else:  
        print prog,"loops 4ever"
```

- Can user enter name of program, X? Input, Y?
 - What's the problem with this program?

CompSci 101, Fall 2012

20.11

Consider this module `Confuse.py`

```
import halting  
print "enter name of program",  
prog = raw_input()  
if halting.doesHalt(prog,prog):  
    while True:  
        pass  
    print "finished"
```

- We want to show writing `doesHalt` is impossible
 - Proof by contradiction:
 - Assume possible, show impossible situation results
- Can a program read a program? Itself?

CompSci 101, Fall 2012

20.12

Some problems take forever, but ...

- Can we visit all cities, no repeats, using Southwest, for less than \$123,329.50
 - RDU->MCO->...->...->...->DEN
 - RDU->DEN->...->...->...->MCO
 - repeat and test, what's the issue here?
 - Can we find shortest path for packets on Internet? Yes!
 - Can we find longest path for silent meditation? No!
 - We don't know how, but if we did!!!
- Contrast towers of Hanoi, 2^n moves always!

CompSci 101, Fall 2012

20.13

Are hard problems easy? Clay Prize

CompSci 101, Fall 2012

20.14

How is Python like all other programming languages, how is it different?

CompSci 101, Fall 2012

20.15

A Rose by any other name...C or Java?

- Why do we use [Python | Java] in courses ?
 - [is | is not] Object oriented
 - Large collection of libraries
 - Safe for advanced programming and beginners
 - Harder to shoot ourselves in the foot
- Why don't we use C++ (or C)?
 - Standard libraries weak or non-existent (comparatively)
 - Easy to make mistakes when beginning
 - No GUIs, complicated compilation model
 - What about other languages?

CompSci 101, Fall 2012
