**def ComputerScience101 (awesome\_Year):**

```
    answer = raw_input ("Do you love CompSci 101?" )
```

```
    if answer == "YES!":
```

I've been through a lot of changes lately

Wondering if I'm an Econ major or pre-Med maybe #what was I thinking...

I'd be a fool if I didn't say

That Compsci's been a light along the way

What a pleasant surprise

That made me realize

Doing well in Compsci doesn't just make me feel smart

But cool and creative because coding's an art

Rising to the challenge gave me a confidence I never knew I had

For me programming and debugging isn't just a fad

CompSci 101 was a breath of fresh air

Before this year- loving algorithms and test cases... I wouldn't dare

But now I'm coding in my dreams

As crazy as it seems

My mind is bursting at the seams

With tools and apps that I'd love to have

...Tools and apps that I'd love make

I guess the only option is to take...

```
print compsci201("I can't wait!")
```
