compsci 101 fall 2016

2

Assignment 9 Due Dec 9

Shhh! No late penalty til Dec 12!

- Write a song, make a video about your experience with CompSci 101

compsci 101 fall 2016

3

Announcements

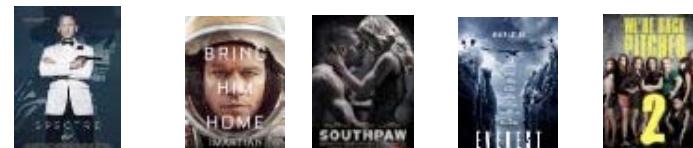

- Reading and RQ due Tuesday
- Assign 8 due Tue., Assign9 due Dec 9
- APT 11 due Dec 9, no penalty til Dec 12!
- Today:
 - Review Recursion
 - Regular Expressions
 - Assignment 8 Recommender

compsci 101 fall 2016

2

Assignment 8

From User Rating to Recommendations

| Spectre | Martian | Southpaw | Everest | PitchPerfect 2 |
|---------|---------|----------|---------|----------------|
| 3 | -3 | 5 | -2 | -3 |
| 2 | 2 | 3 | 2 | 3 |
| 4 | 4 | -2 | 1 | -1 |

- | **What should I choose to see?**
 - What does this depend on?
- | **Who is most like me?**
 - How do we figure this out

compsci 101 fall 2016

4

ReadFood modules: Food Format

bit.ly/101f16-1201-A

- All Reader modules return a tuple of strings: itemlist and dictratings dictionary

```
Shirley
IlForno 3 DivinityCafe 5 McDonalds -1 TheCommons 3 Tandoor 1
Xiawei
McDonalds -3 TheCommons 5 DivinityCafe 5 TheSkillet 1 PandaExpress -5
SoonLee
DivinityCafe 3 IlForno 1 TheSkillet -1 Tandoor 5 PandaExpress -3
Bruce
McDonalds 1 Tandoor 3 DivinityCafe 5 TheCommons 3 TheSkillet 1 IlForno 3 PandaExpress 3
JoJo
TheSkillet 1 McDonalds 1 Tandoor 3 PandaExpress 1
Lee
TheCommons 3 Tandoor 3 DivinityCafe 5 TheSkillet 3 IlForno 1
```

- Translated to:

```
['IlForno', 'TheCommons', 'DivinityCafe', 'PandaExpress', 'TheSkillet',
 'Tandoor', 'McDonalds']
```

```
dict([('JoJo', [0, 0, 0, 1, 1, 3, 1]), ('SoonLee', [1, 0, 3, -3, -1, 5,
 0]), ('Lee', [1, 3, 5, 0, 3, 3, 0]), ('Bruce', [3, 3, 5, 3, 1, 3, 1]),
 ('Xiawei', [0, 5, 5, -5, 1, 0, -3]), ('Shirley', [3, 3, 5, 0, 0, 1, -1])])
```

Data For Recommender

- itemlist are provided in a list of strings
 - Parsing data provides this list
- dictratings provided in dictionary
 - Key is user ID
 - Value is list of integer ratings

| | ABP | BlueEx | McDon | Loop | Panda | Nasher |
|-------|-----|--------|-------|------|-------|--------|
| Sam | 0 | 3 | 5 | 0 | -3 | 5 |
| Chris | 1 | 1 | 0 | 3 | 0 | -3 |
| Nat | -3 | 3 | 3 | 5 | 1 | -1 |

compsci 101 fall 2016

7

Data For Recommender

- Users/Raters rate Items
 - We need to know the items
 - We need to know how users rate each item
- Which eatery has highest average rating?
 - Conceptually: average columns in table
 - How is data provided in this assignment?

| | ABP | BlueEx | McDon | Loop | Panda | Nasher |
|-------|-----|--------|-------|------|-------|--------|
| Sam | 0 | 3 | 5 | 0 | -3 | 5 |
| Chris | 1 | 1 | 0 | 3 | 0 | -3 |
| Nat | -3 | 3 | 3 | 5 | 1 | -1 |

6

compsci 101 fall 2016

Data For Recommender

- Given Parameters
 - itemlist: a list of strings
 - dictratings: dictionary of ID to ratings list
- Can you write
 - Average(itemlist, dictratings)

| | ABP | BlueEx | McDon | Loop | Panda | Nasher |
|-------|-----|--------|-------|------|-------|--------|
| Sam | 0 | 3 | 5 | 0 | -3 | 5 |
| Chris | 1 | 1 | 0 | 3 | 0 | -3 |
| Nat | -3 | 3 | 3 | 5 | 1 | -1 |

compsci 101 fall 2016

8

Drawbacks of Item Averaging

- Are all ratings the same to me?
 - Shouldn't I value ratings of people "near" me as more meaningful than those "far" from me?
- Collaborative Filtering
 - https://en.wikipedia.org/wiki/Collaborative_filtering
 - How do we determine who is "near" me?
- Mathematically: treat ratings as vectors in an N-dimensional space, $N = \#$ ratings
 - Informally: assign numbers, higher the number, closer to me

compsci 101 fall 2016

9

How do you calculate a similarity?

- Me: [3, 5, -3]
- Joe: [5, 1, -1]
- Sue: [-1, 1, 3]
- Joe to Me
- Sue to Me

11

Collaborative Filtering: Recommender

- First determine closeness of all users to me:
 - "Me" is a user-ID, parameter to function
 - Return list of (ID, closeness-#) tuples, sorted
- Use just the ratings of person closest to me
 - Is this a good idea?
 - What about the 10 closest people to me?
- What about weighting ratings
 - Closer to me, more weight given to rating

compsci 101 fall 2016

10

Collaborative Filtering

- For Chris: $12 * [1, 1, 0, 3, 0, -3] = [12, 12, 0, 36, 0, -36]$
- For Sam: $[0, 75, 125, 0, -75, 125]$

| | ABP | BlueEx | McDon | Loop | Panda | Nasher |
|-------|-----|--------|-------|------|-------|--------|
| Sam | 0 | 3 | 5 | 0 | -3 | 5 |
| Chris | 1 | 1 | 0 | 3 | 0 | -3 |
| Nat | -3 | 3 | 3 | 5 | 1 | -1 |

compsci 101 fall 2016

13

Adding lists of numbers

```
[12, 12, 0, 36, 0, -36]  
[ 0, 75, 125, 0, -75, 125]  
[-111, 111, 111, 185, 37, -37]  
-----  
[-99, 198, 236, 221, -38, 52]
```

- Adding columns in lists of numbers
 - Using indexes 0, 1, 2, ... sum elements of list
 - `sum([val[i] for val in d.values()])`

compsci 101 fall 2016

14

Follow 12-step process

- ReadFood first!
 - Read input and save it
 - Get list of restaurants – use that ordering! Set?
 - For each person
 - For each restaurant and its rating
 - Must find location of restaurant in itemlist
 - Then update appropriate counter
 - Print any structure you create to check it

compsci 101 fall 2016

16

Then divide by number of nonzeros

```
[ 12, 12, 0, 36, 0, -36]  
[ 0, 75, 125, 0, -75, 125]  
[-111, 111, 111, 185, 37, -37]  
-----  
[-99, 198, 236, 221, -38, 52]  
/2 /3 /2 /2 /2 /3  
[-49, 66, 118, 110, -19, 17]
```

| | ABP | BlueEx | McDon | Loop | Panda | Nasher |
|-------|-----|--------|-------|------|-------|--------|
| Sam | 0 | 3 | 5 | 0 | -3 | 5 |
| Chris | 1 | 1 | 0 | 3 | 0 | -3 |
| Nat | -3 | 3 | 3 | 5 | 1 | -1 |

Recommend
3rd item

compsci 101 fall 2016

15

Recursion Review

- Function calls a clone of itself
 - Smaller problem
 - Must be a way out of recursion

compsci 101 fall 2016

17

Example

```
def Mystery(num):
    if num > 0:
        return 1 + Mystery(num/2)
    else:
        return 2 + num
```

- $\text{Mystery}(5)$ is $1 + \text{Mystery}(2) = 1 + 4 = 5$
- $\text{Mystery}(2)$ is $1 + \text{Mystery}(1) = 1 + 3 = 4$
- $\text{Mystery}(1)$ is $1 + \text{Mystery}(0) = 1 + 2 = 3$
- $\text{Mystery}(0)$ is 2

compsci 101 fall 2016

18

Revisit the APT Bagels Recursively

```
filename: Bagels.py

def bagelCount(orders) :
    """
    return number of bagels needed to fulfill
    the orders in integer list parameter orders
    """

```

1. `orders = [1,3,5,7]`

Returns: 16

No order is for more than a dozen, return the total of all orders.

2. `orders = [11,22,33,44,55]`

Returns: 175 since $11 + (22+1) + (33+2) + (44+3) + (55+4) = 175$

Review: Recursion to find ALL files in a folder

- A folder can have sub folders and files
- A file cannot have sub files

```
def visit(dirname):
    for inner in dirname:
        if isdir(inner): ----- Is that a directory?
            visit(inner)
        else: ----- If not a directory, it will be a file
            print name(inner), size(inner)
```

compsci 101 fall 2016

19

APT Bagels Recursively

bit.ly/101f16-1201-2

A)

```
def bagelCount(orders):
    if len(orders) > 0:
        return orders[0]/12 + orders[0] + bagelCount(orders[1:])
    else:
        return 0
```

B)

```
def bagelCount(orders):
    if len(orders) > 0:
        return orders[-1]/12 + orders[-1] + bagelCount(orders[:-1])
    else:
        return 0
```

C)

```
def bagelCount(orders):
    return orders[0] + orders[0]/12 + bagelCount(orders[1:])
```

D)

```
def bagelCount(orders):
    if len(orders)>1:
        return orders[1] + orders[1]/12 + bagelCount(orders[2:])
    else:
        return bagelCount(orders[0])
```

23

What is Computer Science?

- ... "it is the study of automating algorithmic processes that scale."
 - https://en.wikipedia.org/wiki/Computer_science
- If you need to find one email address on a webpage, you don't need computer science
 - If you need to scrape every email address, that number in the 10's to 100's, you could use help

compsci 101 fall 2016

24

How do you solve a problem like ...

- How many words end in "aria"?
 - Start with "aria"? Contain "aria"?
 - Why would you care about this?
- Can you find ola@cs.duke.edu, susan.rodger@duke.edu, and andrew.douglas.hilton@gmail.com when searching through a webpage source?
 - What is the format of a "real" email address?

compsci 101 fall 2016

25

Examples of regex's at work

- What do aria\$ and ^aria and aria share?
 - Answers to previous question
- What about the regex .+@.+
 - Turns out that . has special meaning in regex, so does +, so do many characters
- We'll use a module RegexDemo.py to check
 - Uses the re Python library
 - Details won't be tested, regex knowledge will

compsci 101 fall 2016

26

Regex expressions

- Repeat and combine regex parts
 - * means 0 or more occurrences/repeats
 - + means 1 or more occurrences/repeats
 - ? Means (after * or +) to be *non-greedy*
- Expressions match more than one character

| [a-zA-Z] | Brackets create character class |
|------------|----------------------------------|
| (regex) | Tag or group a regex |
| \1 or \2 | Matches previously grouped regex |
| {1} or {n} | Repeat regex 1 or n times |

compsci 101 fall 2016

28

Regex expressions

- Regex parts combined in powerful ways
 - Each part of a regex "matches" text, can extract matches using programs and regex library
 - ^ is start of word/line, \$ is end
- Expressions that match single characters:

| a, a, 9 or ... | Any character matches itself |
|----------------|------------------------------|
| . | Matches any character |
| \w | Matches alphanumeric and _ |
| \d | Matches digit |
| \s | Matches whitespace |

compsci 101 fall 2016

27

Regex examples tried and explained

- Five letter words ending in p? Starts 'd'?
 - ^\w\w\w\w\d\$ but not p\$
- Seven letter words, or seven ending with 'z'
 - Difference between ^\w{7}\$ and ^\w{7}
- Words that start with a consonant:
 - ^[^aeiou] double meaning of ^

compsci 101 fall 2016

29

Regex examples tried and explained

- Five letter words ending in p? Starts 'd'?
 - `^\w\w\w\wp$` but not `....p$`
- Seven letter words, or seven ending with 'z'
 - Difference between `^\w{7}$` and `^\w{7}`
- Start and end with the same two letters like sense and metronome, decipher this:
 - `^(\w\w).*\1$`
- Start and end with three letters reversed, like despised and foolproof?

compsci 101 fall 2016

compsci 101 fall 2016

32

Summary of Regular Expressions

| regex | purpose | regex | purpose |
|---------------------|---|-----------------------------------|---|
| <code>.</code> | any character | <code>*</code> | zero or more of previous regex |
| <code>\w</code> | any alphanumeric character (and <code>_</code>) | <code>+</code> | one or more of previous regex |
| <code>\s</code> | any whitespace character | <code>*?</code> or <code>?</code> | non-greedy version of either <code>*</code> or <code>+</code> |
| <code>\d</code> | any digit character | <code>()</code> | tag/group a regular expression |
| <code>[]</code> | character class, e.g., <code>[A-Z]</code> or <code>[aeiou]</code> | <code>\1, \2, ..</code> | match numbered tagged/grouped regex |
| <code>{n}</code> | n occurrences of preceding regex | <code>^</code> | beginning of line/string |
| <code>[^...]</code> | not the characters in the class, e.g., <code>[^aeiou]</code> | <code>\$</code> | end of line/string |
