Professor Rodger   COMPSCI 101

Introduction to computer science, the semester really flew….
I learned so many things, that I never really knew.
Making totem poles, I thought this class would be a breeze,
Then we were given earthquakes and hangman and it gave me shaky knees.

Time spent at office hours; night after night,
We waited for so many hours, that really isn't right!
So many TA's and so little time,
I wouldn't have to go if there weren't so many things assigned.

APTs and getting all greens,
That put a smile on my face so it seems.
Totally frustrating when testing APTs and you got reds,
Having nightmares about comp sci in my bed!

I will miss filling out Bit.ly forms in class,
Now that this semester is done, I really hope I pass!
I almost made it through comp sci 101,
All I have to do is get that final done!
