CompSci 101 Introduction to Computer Science

'Susan' 'Jackie' 'Mary' 'Eric' 'Jack'

Oct 19, 2017

Prof. Rodger

compsci 101, fall 2017

Announcements

- Reading and RQ due next time
- APT 4 extend one day to Oct 20
 - But note no consulting hours on Friday!
- Assignment 5 due Oct 26
- Today:
 - Review Sets
 - Tuples/generators
 - Enumerate
 - Processing data how to organize it?

2

Latanya Sweeney

Former Chief Technologist at FTC. I am a computer scientist with a long history of weaving technology and policy together to remove stakeholder barriers to technology adoption. My focus is on "computational policy" and I term myself a "computer (cross) policy" scientist. I have enjoyed success at creating technology that weaves with policy to resolve real-world technology-privacy clashes.

Identify 87% of US population using (dob,zip,gender). Director of Harvard Data Privacy Lab, instrumental in HIPAA because of de-identification work

aboutmyinfo.org

• Entered my data

How Unique are You?

Enter your ZIP code, date of birth, and gender to see how unique you are (and therefore how easy it is to identify you from these values).

Date of Birth	Month	Day ~	Year ~		
Gender	● Male ○ Female				
5-digit ZIP					
	Submit

3

Set Operations from pictures bit.ly/101-101917-1

Question: Which operation does the red represent?

Tuples

- Like a list, but cannot change them
 - Define them with ","(5, 7, 8) or 5, 7, 8without ()'s has some limitations!
- Use most list operations on them
 - they are a type of list
 - But immutable
- Examples

compsci 101, fall 2017

7

Example

Example				
x = (4, 6, 8)	z[0][1] = 12			
y = 9, 5, 6	print z			
print x	z[0].append(4)			
print y	print z			
print x[1]	z[0].remove(5)			
print y[1]	z[0].remove(12)			
y[0] = 2	z[0].remove(4)			
z = ([5,6], [7,8])	print z			
print z	v,w = 8,3			

Problem: Longest Name

Given a list of names (one word only) and a letter (assume names start with capital letter, and letter is capital)

names = ['Helen', 'Bob', 'Bart', 'Hugh']

Find the longest name that starts with that letter

compsci 101, fall 2017

compsci 101, fall 2017

9

Code for longest name

```
def longestName(alist, letter):
    longest = ''
    for name in alist:
        if letter == name[0] and
             len(name) > len(longest):
             longest = name
    return longest
```

How do you modify to find the location (position) of the longest name?

compsci 101, fall 2017

10

Problem: Find the position in alist of the longest name that starts with that letter bit.ly/101-101917-2

compsci 101, fall 2017

11

Enumerate

- An iterator, generates a sequence
- Generates tuples of (index, item)
- Used with for loop to get both index and item
- for (index,item) in enumerate(somelist):
 - You get both at the same time!

Solve previous problem with enumerate

• Show enumerate examples

```
for (index,item) in enumerate(w):
for g in enumerate(w):
print enumerate(w)
```

compsci 101, fall 2017 12 compsci 101, fall 2017 13

Problem: Popular Name

- Given a list of names, determine the most popular first name and print that name with all of its last names.
- Input: Names are always two words, names are in a file. If multiple names are on the same line they are separated by a ":"
- Output: Most popular first name, followed by a ":", followed by corresponding last names separated by a blank

compsci 101, fall 2017

14

Example Input File with 5 lines

Susan Smith: Jackie Long: Mary White Susan Brandt

Jackie Johnson:Susan Rodger:Mary Rodger Eric Long:Susan Crackers:Mary Velios

Jack Frost: Eric Lund

Corresponding Output

Susan: Smith Brandt Rodger Crackers

compsci 101, fall 2017

15

What do you need to solve this problem? bit.ly/101-101917-3

How might one organize the data to solve this problem?

How many different ways to solve this problem?

compsci 101, fall 2017 16 compsci 101, fall 2017 17

One way to solve

- Create a list of unique first names
- Create a list of lists of last names that are associated with each first name

compsci 101, fall 2017

18

Now can we solve the problem?

- Compute those two lists that are associated with each other
 - List of unique first names
 - List of corresponding last names
- Compute the max list of last names
- Now easy to print the answer.
- See popular.py

Example – two lists

	Unique First names	Corresponding Last names		
0	'Susan'	0	['Smith', 'Brandt', 'Rodger', 'Crackers']	
1	'Jackie'	1	['Long', 'Johnson']	
2	'Mary'	2	['White','Rodger','Velios']	
3	'Eric'	3	['Long', 'Lund']	
4	'Jack'	4	['Frost']	

compsci 101, fall 2017

19

Look at the code for popular.py www.bit.ly/101-101917-4

- Which datafile is read in?
- What format is namelist in?
- Write the code for uniqueFirstNames

compsci 101, fall 2017 21 compsci 101, fall 2017 22

Write the code: www.bit.ly/101-101917-5

- allLastNames
- correspondingLastNames
- printFirstWithLasts

compsci 101, fall 2017

23

Finish

maxnum = max([len(item) for item in lastNames])
print maxnum

lastIndex = [index for (index, v) in
enumerate(lastNames) if len(v) == maxnum]
print "first name with most last names is:"

compsci 101, fall 2017 24

Another way – list of lists

First word in each list is a first name The rest are last names.

```
['Susan', 'Smith', 'Brandt', 'Rodger', 'Crackers']

['Jackie', 'Long', 'Johnson']

['Mary', 'White', 'Rodger', 'Velios']

['Eric', 'Long', 'Lund']

['Jack', 'Frost']
```

Expanding the Problem

• Suppose we want to read from multiple data files

names1.txt, names2.txt, names3.txt

See processFiles in popular.py
