Problem 2

Write **panda** Procedure **changeColor**

 - One parameter of type **Decimal** named **turnAmount**
 - One parameter of type **Paint** named **someColor**
 - One parameter of type **TurnDirection** named **someDirection**.
- When called, taking 3 seconds total, the panda turns around the **turnAmount** in the direction **someDirection** while at the same time changing to the color **someColor**.

funJumping story(cont)

- The disc moves up 1 and back down to the ground carrying the bunny up and down with it. As the disc moves up it changes its color to color1 and the bunny changes its color to color2.
- Next the bunny changes its opacity to opValue
- The disc moves up 1 and back down again with the bunny
- Then instantly, the bunny turns back to its original color, the bunny is no longer faded and the disc disappears.

A solution

The screenshot shows a Scratch script for a procedure named `funJumping`. The procedure has three parameters: `DecimalNumber opValue`, `Paint color1`, and `SDisc someDisc`. The script is organized as follows:

- `do in order` block containing:
 - `do in order` block containing:
 - `this setVehicle someDisc`
 - `do together` block containing:
 - `someDisc move UP, 1.0` with `add detail`
 - `someDisc setPaint color1` with `add detail`
 - `this setPaint color2` with `add detail`
 - `someDisc move DOWN, 1.0` with `add detail`
 - `this setOpacity opValue, duration 0.0` with `add detail`
 - `someDisc move UP, 1.0` with `add detail`
 - `someDisc move DOWN, 1.0` with `add detail`
 - `this setPaint WHITE, duration 0.0` with `add detail`
 - `this setOpacity 1.0, duration 0.0` with `add detail`
 - `someDisc setOpacity 0.0, duration 0.0` with `add detail`
