if allAPTgreen == satisfying:  
    print(  
  
        Oh, when we first met  
        I could not believe  
        of an APT  
        only three lines, no sweat  
  
        but week after week, day after day  
        the code began to grow  
        and i reminisced on days long ago  
        as my spirit began to decay  
  
        another assignment I see  
        scared to open the file  
        my future holds hours of code to compile  
        but i issue this decree  
  
        although the errors and bars of red  
        make me wish to quit and die  
        lines of green appear in my eye  
        overjoyed and satisfied, a tear i shed  
  
    )
```
