## Assignment 7: Create

Sitting in this rickety old chair of Lily  
A sigh follows another  
Eyes oscillating between Pycharm and Python tutor  
Lines. Lines and lines of code not comprehensible

When will that time come?  
When we won't look at each other like it's our first time every time

It may seem hopeless  
People may disregard your parameters in learning a language  
Bright red error messages may discourage you  
Bright green pass messages may give you false hope

But consistency is key.  
Again and again in an infinite loop  
Learn to append, remove, mutate, and let go  
Practice until muscle memory takes over

It is not a farewell yet but a see you later  
Thank you Professor Rodger, Ms. Velasco, and TA's for all you do  
Until next time

return *end*
