Parsing

Parsing: Deciding if $x \in \Sigma^*$ is in L(G) for some CFG G.

Review

Consider the CFG G:

$$\begin{aligned} S &\to Aa \\ A &\to AA \mid ABa \mid \lambda \\ B &\to BBa \mid b \mid \lambda \end{aligned}$$

Is ba in L(G)? Running time?

Remove λ-rules, then unit productions, and then useless productions from the grammar G above. New grammar G' is:

$$\begin{aligned} S &\to Aa \mid a \\ A &\to AA \mid ABa \mid Aa \mid Ba \mid a \\ B &\to BBa \mid Ba \mid a \mid b \end{aligned}$$

Is ba in L(G)? Running time?

Top-down Parser:

- Start with S and try to derive the string.

$$S \to aS \mid b$$

- Examples: LL Parser, Recursive Descent

Bottom-up Parser:

- Start with string, work backwards, and try to derive S.

- Examples: Shift-reduce, Operator-Precedence, LR Parser

We will use the following functions FIRST and FOLLOW to aid in computing parse tables.

The function FIRST:

Some notation that we will use in defining FIRST and FOLLOW.

G=(V,T,S,P)
w,v$\in$(V$\cup$T)*
a$\in$T
X,A,B$\in$V
X$_I$ $\in$(V$\cup$T)$^+$

Definition: FIRST

Given a context-free grammar G = (V, T, S, P), $a \in T$ and $w, v \in (V \cup T)^*$, the **FIRST(w)** is the set of terminals that can be the first terminal a in $w \stackrel{*}{\Rightarrow} av$. λ is in FIRST(w) if $w \stackrel{*}{\Rightarrow} \lambda$.

We show how to calculate FIRST for variables and terminals in the grammar, for λ and for strings.

Algorithm for FIRST

Given a grammar G=(V, T, S, P), calculate FIRST(w) for w in $(V \cup T)^*$,

1. For $a \in T$, $FIRST(a) = \{a\}$.
2. FIRST(λ) = $\{\lambda\}$.
3. For $A \in V$, set FIRST(A) = $\{\}$.
4. Repeat these steps until no more terminals or λ can be added to any FIRST set for variables.

   For every production $A \to w$
   FIRST(A) = FIRST(A) $\cup$ FIRST(w)

5. For $w = x_1x_2x_3 \ldots x_n$ where $x_i \in (V \cup T)$

   a) FIRST(w) = FIRST(x_1) - $\{\lambda\}$
   b) For i from 2 to n do:
   if $x_j \overset{*}{\Rightarrow} \lambda$ for all j from 1 to $i-1$ then
   FIRST(w) = FIRST(w) $\cup$ FIRST(x_i) - $\{\lambda\}$
   c) If $x_i \overset{*}{\Rightarrow} \lambda$ for all i from 1 to n then
   FIRST(w) = FIRST(w) $\cup$ $\{\lambda\}$

Example: $L = \{a^n b^m c^n : n \geq 0, 0 \leq m \leq 1\}$

S $\to$ aSc | B
B $\to$ b | λ

FIRST(B) =

FIRST(S) =

FIRST(Sc) =

Example

S → BCD | aD
A → CEB | aA
B → b | λ
C → dB | λ
D → cA | λ
E → e | fE

FIRST(S) =

FIRST(A) =

FIRST(B) =

FIRST(C) =

FIRST(D) =

FIRST(E) =

Definition: FOLLOW

Given a context-free grammar G = (V, T, S, P), $A \in V$, $a \in T$ and $w, v \in (V \cup T)^*$, **FOLLOW(A)** is the set of terminals that can be the first terminal a immediately following A in some sentential form $vAaw$. \$ is always in FOLLOW(S).

Algorithm for FOLLOW

To calculate FOLLOW for the variables in G=(V, T, S, P). Let $A, B \in V$ and $v, w \in (V \cup T)^*$.

1. \$ is in $FOLLOW(S)$.
2. For $A \to vB$, $FOLLOW(A)$ is in $FOLLOW(B)$.
3. For $A \to vBw$:
   (a) $FIRST(w) - \{\lambda\}$ is in $FOLLOW(B)$.
   (b) If $\lambda \in FIRST(w)$, then $FOLLOW(A)$ is in $FOLLOW(B)$.

Example:

$$S \rightarrow aSc \mid B$$
$$B \rightarrow b \mid \lambda$$

FOLLOW(S) =

FOLLOW(B) =

Example:

$$S \rightarrow BCD \mid aD$$
$$A \rightarrow CEB \mid aA$$
$$B \rightarrow b \mid \lambda$$
$$C \rightarrow dB \mid \lambda$$
$$D \rightarrow cA \mid \lambda$$
$$E \rightarrow e \mid fE$$

FOLLOW(S) =

FOLLOW(A) =

FOLLOW(B) =

FOLLOW(C) =

FOLLOW(D) =

FOLLOW(E) =
