To My Favorite Class

In Steiger's class we take our seat,
(As close to the front as we can possibly be),
He smiles, he jokes, keeping things bright,
To make complicated Python loops feel just alright.

We learned to index from left to right,
To let our for loops loop just right,
To build functions with parameters neat,
Little codes that stay discreet.

We've debugged errors line by line,
Turned chaos into something fine,
And made dictionaries to see,
How keys and values live in harmony.

Here's to the class that helped us grow,
Where our code made sense row by row,
And Steiger carried us through,
Comp Sci 101 I'll definitely remember you.
