

If you give a CS101 student an APT...

They'll attack it with vigor  
They'll write lines and lines of code  
They'll await a run with exit code 0  
They'll happily press "save and grade" on PrairieLearn

Only to find...

It's all red!  
0 test cases correct!  
APT of doom and despair!

But a CS101 student is persistent...

They'll attack it again  
They'll debug and debug and debug  
They'll submit and resubmit

Until finally...

ALL GREEN!  
And only 5 more APTs to go...

If you give a CS101 student an assignment...

They'll *swear* they'll start it well in advance  
They'll read over the assignment description  
They'll plan out their approach carefully

Then they'll code...

And code...  
And code...  
And code...

And when they're finally done...

They'll submit to the autograder  
And wait for it to load  
And hope and pray all will be well

Only to find...

0.0 on the autograder!  
Infinite error messages!  
Assignment of doom and despair!

But a CS101 student is persistent...

They'll go back  
They'll debug... and debug...

Until finally...

ONE HUNDRED PERCENT  
And onto the next.
