

Computer Science 101: Assignment 8

poem.py

```
def assignment8(compsci101):  
    classCount = 0  
    if endOfClass == True:  
        dukeDevils == Blue  
        while endOfClass != True:  
            d[class] = fullOfLearning  
            WOTOCOUNT += unending  
            turtleTurtle = stillRunningInCirclesAndSquares  
            assignments = nowCompleted  
            finalExam += toBeRocked  
    return aGreatSemester
```

a poem For computer science 101

```
1 While compsci 101 comes to an end,  
2 I do not look back without the fondness of a friend,  
3 If I were to be given the chance,  
4 I would do it over again without a second glance,  
5 define function(classRepeat)  
    6 For turtles and tuples,  
    7 While loops and breaks,  
    8 If in the final hour my APTs didn't go through,  
    9 Certainly the lack of green would have turned me blue,  
10 Answers coming from the top of the dome,  
11 Completely consuming every minute of my time at home,  
12 A mastermind I have become,  
13 At turning the dictionary to count plus equals one,  
14 If assignments started early turned to relief,  
15 Those started late turned to grief,  
16 Burning through midnight hours,  
17 Using a turtle to plant virtual flowers,  
18 line = function(ClassRepeat)  
    19 For turtles and tuples,  
    20 While loops and breaks,  
    21 If in the final hour my APTs didn't go through,  
    22 Certainly the lack of green would have turned me blue,  
23 like this poem the class comes to an end,  
24 my time ending with python as a friend,  
25 for the semester has come short,  
26 if i tell it you it is not cause for concern,  
27 now it comes only to the final statement of return,  
    28 return a poem For computer science 101
