P7: Create

APT's

I clicked on test, and see no green

I tried my best, it's too hard it seems

Oh APT, why won't you work with me

Oh APT, this isn't how it should be

My code seems fine, I can't find the bug

I might need some wine, I might need to chug

Oh APT, why won't you work with me

Oh APT, this isn't how it should be

What ever will I do?

The APT is almost due

JavaTutor, I don't know how to use you

Yes, I know, I should probably learn how to

I guess I'll go to consulting hours

It's like the UTA's have super powers

Now after a couple tries, I'm seeing more green
Until my computer dies, I will not be seen

Assignments

I check the calendar and see another assignment
My brain is already going out of alignment

I begin to read through the google doc
Would rather spend this time on TikTok

I start to code and I think it's going good
GradeScope then goes and ruins the mood

But I do not give up,
It's time to fill up the coffee cup

I follow the steps and start to debug
At some points, I feel like I need a hug

But then I press resubmit
And I must admit
There's few things better
Then when the 100% hit
