Name: Eli Feder
NetId: esf10

Ode to Rodger

CS201—a class where you learn the fundamentals of Java
Make sure to fork and clone, or you will get heated, like lava
All green on an APT Quiz? Sweeter than baklava

You will create and alter many different lists
Be sure to take a break sometime, or you will get sore wrists
Collaborate when allowed to, go for some assists

When choosing something to alter, many different objects may be suitable
Make sure you choose one that is mutable
There are many ways to solve a problem, answers are disputable

Through many different objects we can iterate
Possibly an object with sheep, should, and sleep, words that alliterate
Turn in assignments before grace period, or they'll be late

You may elect to put elements in some type of set
If you don't understand them right away, that's okay, don't fret
Always do the homework, material learned is easy to forget

Java is the language in which we program
It can be tricky at times, you'll get in a jam
Use it to send an email, hopefully not spam

If you ever get stuck, a great resource is a friend, or your TA
They can bring you up when you're down, no longer feel gray
Finish your assignments in no time at all, get on with your day

As class comes to an end, we approach the final hour
I now can code on my own, I have the power
The feeling is as sweet as the smell of a flower
