### Announcements

- APT-7 due TODAY!
- APT-8 out Tuesday, Apr 13
- Assign 6 Recommender, due Apr 22
  - One grace day, NO LATE DAYS, must be in Apr 23
- APT Quiz 2 now through Sunday, April 11
  - Two Parts, Start on Sakai
- No Class Tues, April 13
  - Instead take Exam 3 on GradeScope

# CompSci 101 – In-Person and Zoom Last week of class (April 20 and 22)

- Limit is 60 people per day
- · Can only come one of those days
- Sign up and I will let you know which day you can come (subject to space) and where to come
- Room is on West Campus
- Sign up here:
  - http://bit.ly/101s21-inperson

### **PFTD**

- Collaboration and Creativity
  - The power of working together with code
- Review modules and exceptions
  - Concepts used in Lab 11, leveraging creativity
- How to solve it
  - Thinking about steps 5-7, Python, and scale
- MedalTable APT

## The Power of Collaboration: Ge Wang, Duke Prof. at Stanford

- Duke 2000: Music and Computer Science
  - <a href="https://www.stanforddaily.com/2016/03/09/qa-with-ge-wang-father-of-stanford-laptop-orchestra/">https://www.stanforddaily.com/2016/03/09/qa-with-ge-wang-father-of-stanford-laptop-orchestra/</a>
  - http://www.youtube.com/watch?v=ADEHmkL3HBg
- About Design in Compsci 308

Our investment into a huge and meticulous design process was a huge factor in making later progress. 35000+ lines of code / design / documentation gave us a project we were all very happy and proud to be a part of.

4/8/21

Compsci 101, Spring 202

6

## Why use modules?

- Easier to organize code
- Easier to reuse code
- Easier to change code
  - As long as the "what" is the same, the "how" can change
    - Ex: sorted(...), one function many sorting algorithms

## In laterLab, Modules for Creating

- "MadLibs" → Tag-a-Story
  - User chooses template
  - Computer fills everything in

In lecture I saw a <color> <noun>
For lunch I had a <adjective> <food>
The day ended with seeing a <animal> <verb> in <place>

4/8/21 Compsci 101, Spring 2

4/8/21

Compsci 101, Spring 2021

8

## From <noun> to story

In lecture I saw a <color> <noun> For lunch I had a <adjective> <food> The day ended with seeing a <animal> <verb> in <place>

In lecture I saw a magenta house For lunch I had a luminous hummus The day ended with seeing a cow sleep in Mombasa

Compsci 101, Spring 2021

4/8/21

Demo

4/8/21

## Let's create/modify a story

- Choose a template or make a new one
  - We'll choose lecturetemplate.txt first
- Add a new category/replacement
  - We'll choose number and list some choices.
- Run the program and test our modifications
  - Randomized, hard to test, but doable

Main Parts for tag-a-story

- Put everything together, the template and words
  - Storyline.py
- Loading and handling user choosing templates
  - TemplateChooser.py
- Loading and picking the word for a given tag
  - Replacements.py

4/8/21

## Main Parts for tag-a-story

- Put everything together, the template and words
  - Storyline.py
- Loading and handling user choosing templates
  - TemplateChooser.py
- Loading and picking the word for a given tag
  - Replacements.py

4/8/21

Compsci 101, Spring 2021 13

## Creating a story

- Main steps in Storyline.py
  - Get template use a module
  - Go through template
    - Get words for a tag use a module
    - · Replace tag with word
- Using modules
  - Assume they work
  - Only care what they do, not how (abstraction!)

4/8/21

4/8/21

## Modules in Action: makeStory() is in Storyline.py

- How can we access TemplateChooser functions?
  - import and access as shown

```
def makeStory():
42
43
          let user make a choice of
44
          available templates and print
45
          the story from the chosen template
46
47
          lines = TemplateChooser.getTemplateLines("templates")
          st = linesToStory(lines)
48
          print(st)
```

## Modules in Action: makeStory() is in Storyline.py

- How can we access TemplateChooser functions?
  - import and access as shown

```
module (file)
      def makeStory():
42
          let user make a choice of
43
44
          available templates and
45
          the story from the chosen template
46
          lines = TemplateChooser.getTemplateLines("templates")
47
          st = linesToStory(lines)
48
          print(st)

```

### The other module's "what"

- Get template
  - TemplateChooser.getTemplateLines(DIR)
  - What:
    - From the templates in the directory DIR (type: str)
    - Return a list of strings, where each element is a line from one of the templates in DIR
- Word for a tag
  - Replacements.getReplacement(TAG)
  - What:
    - Return a random word that matches TAG (type: str)

Compsci 101, Spring 2021 21

## Main Parts for tag-a-story

- Put everything together, the template and words
  - Storyline.py
- Loading and handling user choosing templates
  - TemplateChooser.py
- Loading and picking the word for a given tag
  - Replacements.py

4/8/21

# These Steps in Code getTemplateLines in TemplateChooser.py

- Read directory of templates, convert to dictionary
  - Let user choose one, open and return it

```
def getTemplateLines(dirname):
59
60
           dirname is a string that's the name of a folder
61
62
           Prompt user for files in folder, allow user
           to choose, and return the lines read from file
63
64
           d = dirToDictionary(dirname)
65
           lines = chooseOne(d)
66
           return lines
67
 4/8/21
                        Compsci 101, Spring 2021 25
```

# Creating User Menu dirToDictionary in TemplateChooser.py

What does this function return? What type?

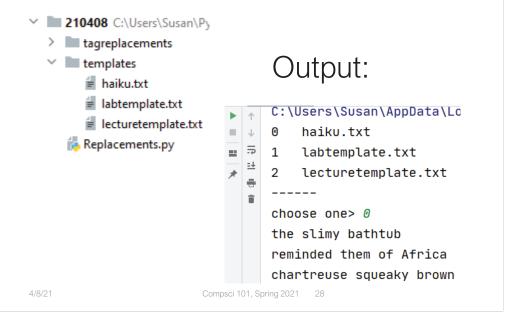

```
def dirToDictionary(dirname):
11
12
            d = \{\}
18
19
            index = 0
            for one in pathlib.Path(dirname).iterdir():
20
21
                 d[index] = one
22
                # print(type(one))
                 index += 1
23
24
            return d
  4/8/21

```

# Creating User Menu dirToDictionary in TemplateChooser.py

What does this function return? What type?

```
d is:
       def dirToDictionary(dirname): 0 -> haiku.txt
11
                                          1 -> labtemplate.txt
12
                                          2 -> lecturetemplate.txt
            d = \{\}
18
            index = 0
19
            for one in pathlib.Path(dirname).iterdir():
20
21
                d[index] = one
                # print(type(one))
22
                index += 1
23
24
            return d
  4/8/21
```

### Folder in Pycharm

## pathlib Library

- Path: "rodger/Pycharm/cps101/lab11/temp/haiku.txt"
- The pathlib library is more recent/Python3
  - Simpler, easier to use than functions from os
- Handles domain specifics!
  - Doesn't matter if on Windows, Mac, etc.
  - We worry about the what, it handles the how

4/8/21

Compsci 101, Spring 2021 29

## pathlib Library cont.

- Path: "rodger/Pycharm/cps101/lab11/temp/haiku.txt"
- pathlib.Path(DIR).iterdir()
  - Returns iterable of Path objects representing each "thing" in the directory DIR
- Path object's .parts tuple of strings, each element is a piece of a filename's path
  - ('rodger', 'Pycharm', 'cps101', 'lab11', 'temp', 'haiku.txt')

4/8/21

Compsci 101, Spring 2021 30

## Understanding the Unknown chooseOne in TemplateChooser.py

- We will return to this, but analyze parts now
  - What's familiar? What's not familiar ...

```
def chooseOne(d):
          while True:
              for key in sorted(d.keys()):
                   print("%d\t%s" % (key, d[key].parts[-1]))
              print("----")
50
              st = input("choose one> ")
51
              trv:
52
                   val = int(st)
53
                   if 0 <= val and val < len(d):</pre>
                       return reader(d[val])
55
              except ValueError:
                   print("please enter a number")
```

## Python exceptions

- · What should you do if you prompt user for a number and they enter "one"
  - Test to see if it has digits?
- Use exceptions with try: and except:
  - See code in function **chooseOne** from TemplateChooser.py

## Handling Exceptions

What happens: x = int("123abc")

```
st = input("choose one> ")

try:

val = int(st)
 if 0 <= val and val < len(d):
    return reader(d[val])

except ValueError:
    print("please enter a number")</pre>
```

WOTO-1 Modules http://bit.ly/101s21-0408-1

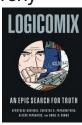

4/8/21 Compsci 101, Spring 2021 33

4/8/21 Compsci 101, Spring 2021 34

## Christos Papadimitriou

Gödel prize for concept of "price of anarchy"

I would say that, quite generally, computer scientists are going to find themselves interacting more with other fields. I encourage my students to go completely wild in their curriculum, to go out and learn not only that which they think they should learn in order to be good computer scientists—usually mathematics and programming and engineering and so on—but learn about everything else, about psychology, economics, about business, about biology, about the humanities. (2008)

## When and What's in CompSci 101

- Problem to solve
  - Use 7 steps
  - Step 5: How do you translate algorithm to code?
    - What do you use to solve it?
    - When do you use it?

4/8/21 Compsci 101, Spring 2021 35 4/8/21 Compsci 101, Spring 2021 36

### What are the "what's"?

- Data Structures: list, set, dictionary, tuple
- Loops and iterables: from for to while to iterdir()
- Other:
  - List comprehensions
  - Parallel lists
  - Lambda
  - If...if...if
  - If...elif...else

4/8/21

Compsci 101, Spring 2021 37

### Quick When's and What's for 101

- Whichever makes more sense to you:
  - Parallel lists vs dictionaries
  - If...if...if vs if...elif...else
  - List comprehension vs for loop
  - Tuples vs Lists
    - If you want to prevent mutation -> tuples
  - Need single line function
    - Lambda vs create normal helper function

Compsci 101, Spring 2021 38

### APT – Sorted Freqs

#### **APT SortedFreqs**

#### **Problem Statement**

The frequency with which data occurs is sometimes an important statistic. In this problem you'll determine how frequently strings occur and return a list representing the frequencies of each different/unique string. The list returned contains as many frequencies as there are unique strings. The returned frequencies represent an alphabetic/lexicographic ordering of the unique words, so the first frequency is how

#### Specification

```
filename: SortedFreqs.py
def freqs(data):
    return list of int values corresponding
   to frequencies of strings in data, a list
    of strings
```

many times the alphabetically first word occurs and the last frequency is the number of times the alphabetically last word occurs.

Consider these strings (quotes for clarity, they're not part of the strings)

```
["apple", "pear", "cherry", "apple", "cherry", "pear", "apple", "banana"]
```

The list returned is [3,1,2,2] since the alphabetically first word is "apple" which occurs 3 times; the second word alphabetically is "banana" which occurs once, and the other words each occur twice.

## What's the best way to ...

- SortedFreqs
  - https://www2.cs.duke.edu/csed/pythonapt/sortedfregs.html
- Count how many times each string occurs
  - Create d = {}, iterate over list updating values
  - Use data.count(w) for each w

4/8/21

Compsci 101, Spring 2021 40

## What's the best way to ...

- SortedFreqs
  - https://www2.cs.duke.edu/csed/pythonapt/sortedfregs.html
- Count how many times each string occurs
  - Create d = {}, iterate over list updating values
  - Use data.count(w) for each w
    - · Wait, that looks like ...

```
def freqs(data):
    return [data.count(d) for d in sorted(set(data))]
```

4/8/21

Compsci 101, Spring 2021 41

## Wait, wait, but what's ...

- SortByFreqs
  - https://www2.cs.duke.edu/csed/pythonapt/sortbyfregs.html
- Sort by # occurrences high to low
  - Tuples with count/lambda and reverse=True?
  - Break ties in alphabetical order: two passes

## APT: SortByFreqs

#### **APT SortByFreqs**

#### **Problem Statement**

The frequency with which data occurs is sometimes an important statistic. In this problem you are given a list of strings and must determine how frequently the strings occur. Return a list of strings that is sorted (ordered) by frequency. The first element of the returned list is the most frequently occurring string, the last element is the least frequently occurring. Ties are broken

```
Specification
 filename: SortByFreqs.py
 def sort(data):
     return list of strings based on
     the list of strings in parameter data
```

by listing strings in lexicographic/alphabetical order. The returned list contains one occurrence of each unique string from the list parameter.

Consider these strings (quotes for clarity, they're not part of the strings).

```
["apple", "pear", "cherry", "apple", "pear", "apple", "banana"]
The list returned is:
   [ "apple", "pear", "banana", "cherry" ]
```

since the most frequently occurring string is "apple" which occurs 3 times; the string "pear" occurs twice and the other strings each occur once so they are returned in alphabetical order.

### Wait, wait, but what's ...

SortByFreqs

4/8/21

- https://www2.cs.duke.edu/csed/pythonapt/sortbyfregs.html
- Sort by # occurrences high to low
  - Tuples with count/lambda and reverse=True?
  - Break ties in alphabetical order: two passes

```
def sort(data):
    tups = [(data.count(t),t) for t in sorted(set(data))]
    result = [t[1] for t in sorted(tups_key=lambda x_: x[0]_reverse=True)]
    return result
```

## SortByFreqs Example

#### SortByFreqs

4/8/21

```
def sort(data):

tups = [(data.count(t),t) for t in sorted(set(data))]

result = [t[1] for t in sorted(tups,key=lambda x : x[0],reverse=True)]

return result
```

Compsci 101, Spring 2021 45

```
SortByFreqs Example
```

#### SortByFreqs

https://www2.cs.duke.edu/csed/pythonapt/sortbyfregs.html

```
def sort(data):
    tups = [(data.count(t),t) for t in sorted(set(data))]
    result = [t[1] for t in sorted(tups,key=lambda x : x[0],reverse=True)]
    return result
    data = ["apple", "pear", "cherry", "apple", "pear", "apple", "banana"]
    tups = [(3, "apple"),(1, "banana"),(1,"cherry"),(2,"pear")]
    sorted(...) line 8 = [(3,"apple"),(2,"pear"),(1, "banana"),(1,"cherry")]
    result = ["apple", "pear", "banana", "cherry"]
```

PRINT A LOT!

4/8/21 Compsci 101, Spring 2021 46

## WOTO-2 http://bit.ly/101s21-0408-2

### **APT: MedalTable**

http://bit.ly/apt-medal-table

4/8/21 Compsci 101, Spring 2021 47

#### **APT: MedalTable**

#### **Problem Statement**

The Olympic Games will be held, and have been held (and might be being held). Given the results of the olympic disciplines, generate and return the medal table.

The results of the disciplines are given as a String list results, where each element is in the format "GGG SSS BBB". GGG, SSS and BBB are the 3-letter country codes (three capital letters from 'A' to 'Z') of the countries winning the gold, silver and bronze medal, respectively.

```
Specification

filename: MedalTable.py

def generate(results):
    """
    return list of strings
    based on data in results, a list of strings
    """

# you write code here
    return []
```

The medal table is a \$\pi xing 1 is t with an element for each country appearing in results. Each element has to be in the format "CCO G S B" (quotes for clarity), where G, S and B are the number of gold, silver and bronze medals won by country CCO, e.g. "AUT 1 4 1". The numbers should not have any extra leading zeros.

Sort the elements by the number of gold medals won in decreasing order. If several countries are tied, sort the tied countries by the number of silver medals won in decreasing order. If some countries are still tied, sort the tied countries by the number of bronze medals won in decreasing order. If a tie still remains, sort the tied countries by their 3-letter code in ascending alphabetical order.

```
1. ["ITA JPN AUS", "KOR TPE UKR", "KOR KOR GBR", "KOR CHN TPE"]

Returns:
[ "KOR 3 1 0", "ITA 1 0 0", "TPE 0 1 1", "CHN 0 1 0", "JPN 0 1 0",
 "AUS 0 0 1", "GBR 0 0 1", "UKR 0 0 1"
]

```

## Tracking the Data

- What do we need to obtain for each country?
  - What's the data, how do we store it?
  - What's the data, how do we calculate it?
- Method and code to transform input
  - What will we store, how do we initialize/update
  - Verifying we've done this properly

1 Compsci 101. Sr

## Use a dictionary?

- 3 dictionaries
  - Country to Gold count
  - Country to Silver count
  - Country to Bronze count

## Use a dictionary?

- 3 dictionaries
  - Country to Gold count
  - Country to Silver count
  - Country to Bronze count
- 1 dictionary
  - Map country to [gld count, sil count, bro count]

4/8/21 Compsci 101, Spring 2021 51 4/8/21 Compsci 101, Spring 2021 52

## Example: dictionary d

Process first string: "KOR TPE UKR"

Process second string: "KOR KOR TPE"

Compsci 101, Spring 2021 53

## Example: dictionary d

Process first string: "KOR TPE UKR"

Process second string: "KOR KOR TPE"

## Sorting the Data

• Use dictionary to get list of tuples

- Sort by what first?
- Sort by what second?
- Sort by what third?
- Etc.
- Any of those sorts by reverse order?
- After sorting, convert to strings to return
- Print to verify, two passes like SortByFreqs

## Sorting dictionary in MedalTable

- Write helper function to create that dictionary
- Sort by [gold, silver, bronze]. Just sort?
  - Tuples and lists sorted in index order
