CompSci 101
Main, Functions, Import, Random, Conditionals
Announcements

• Upcoming due dates
  • Sakai quizzes 1-4: 2/4 @145pm.
    • All future quizzes due @145pm day of lecture
  • Assignment 0-TODAY @1130pm
  • Assignment 1-released today (due 2/11 @1130pm)
  • Last day to register (TODAY)-can’t change labs without permission #
    • https://www.cs.duke.edu/undergrad/registration
• Consulting hours vs. office hours
• Piazza channel
D is for ...

• Design
  • Great programs are the result of great designs. (KISS principle)
• Decomposition
  • Breaking down a problem/task into smaller subproblems/subtasks
• Debugging
  • A key skill in making your programs run
• Data (Science)
  • Creating information from 0's and 1’s
Computer Scientists to Know

Why do we need this statement?

"""

Created 1/25/2021
@author: anw
"""

if __name__ == '__main__':
if __name__ == '__main__':
    name = "Jeff"
    hours = 15
    rate = 15

    # Calculate and output total pay
    totalPay = hours * rate
    print("Total Pay for " + name + "=$" + str(total_Pay))
Functions-Why Do We Need Them?

All the single ladies (all the single ladies)
All the single ladies (all the single ladies)
All the single ladies (all the single ladies)
All the single ladies
Now put your hands up

Up in the club, we just broke up
I'm doing my own little thing
You decided to dip but now you wanna trip
'Cause another brother noticed me
I'm up on him, he up on me
Don't pay him any attention
'Cause I cried my tears
For three good years
Ya can't be mad at me

'Cause if you like it then you should have put a ring on it
If you like it then you should've put a ring on it
Don't be mad once you see that he want it
If you like it then you should've put a ring on it

Whoa uh oh uh oh oh oh oh oh oh uh oh uh oh
Whoa uh oh uh oh oh oh uh oh uh oh

If you like it then you should have put a ring on it
If you like it then you should've put a ring on it
Don't be mad once you see that he want it
If you like it then you should've put a ring on it

I got gloss on my lips, a man on my hips
Hold me tighter than my Dereon jeans
Acting up, drink in my cup
I can't care less what you think
I need no permission, did I mention
Don't pay him any attention
'Cause you had your turn
And now you gonna learn
What it really feels like to miss me

'Cause if you like it then you should have put a ring on it
If you like it then you should've put a ring on it
Don't be mad once you see that he want it
If you like it then you should've put a ring on it

Whoa uh oh uh oh oh oh oh oh oh oh oh oh
Whoa uh oh uh oh oh oh oh oh oh oh oh oh
What’s the Difference?

All the single ladies (all the single ladies)
All the single ladies (all the single ladies)
All the single ladies (all the single ladies)
All the single ladies
Now put your hands up

Up in the club, we just broke up
I'm doing my own little thing
You decided to dip but now you wanna trip
’Cause another brother noticed me
I'm up on him, he up on me
Don't pay him any attention
’Cause I cried my tears
For three good years
Ya can't be mad at me

’Cause (Chorus)
If you like it then you should have put a ring on it
If you like it then you should've put a ring on it
Don't be mad once you see that he want it
If you like it then you should've put a ring on it

(Refrain)
Whoa uh oh uh oh oh uh oh uh oh
Whoa uh oh uh oh oh uh oh uh oh

Chorus

I got gloss on my lips, a man on my hips
Hold me tighter than my Dereon jeans
Acting up, drink in my cup
I can't care less what you think
I need no permission, did I mention
Don't pay him any attention
’Cause you had your turn
And now you gonna learn
What it really feels like to miss me

’Cause (Chorus)

Refrain

Chorus

Refrain

Refrain

Chorus
Benefits of Functions

- Easier to
  - Read/understand
  - Modify
  - Test
  - Debug
- Pro tip: Look for any repetition in your programs
Creating/Using Functions

1. Define the function (How it works)
2. “Call” the function (Using it)

```python
def functionName(parameters):
    block

if __name__ == '__main__':
    variable = functionName(arguments)
```
Update this program to:

- Create function `calculate_pay`
  - Calculates/outputs pay for each student
- Use `calculate_pay` in program to update this program

```python
if __name__ == '__main__':
    name = "Jeff"
    hours = 15
    rate = 15

    totalPay = hours*rate
    print("Total Pay for " + name + "=$" + str(totalPay))

    name = "Sonia"
    hours = 19.5

    totalPay = hours*rate
    print("Total Pay for " + name + "=$" + str(totalPay))
```
Why Import??

```
import module_name

if __name__ == '__main__':
    print(module_name.function_name(arguments))
```

Python Standard Library

- [https://tinyurl.com/kt4ogfu](https://tinyurl.com/kt4ogfu)

Programmer-defined modules
Can we only import modules from the Python Standard Library?

**def output_num(value):**
print("The value from your main code was "+str(value))

**def output(value):**
print("Number" + str(value))

if __name__ == '__main__':
    number = 28
    output(number)

**import mymodule**

**Updated test.py**
**imports mymodule to use output_num() function**

**Module named mymodule.py**

**Module named test.py**
**we want to import mymodule into here and use the output_num function**
Random numbers

• `random.random()`  
  • Return floating point number in range [0.0, 1.0)

• `random.randint(a, b)`  
  • Return random integer N such that a ≤ N ≤ b

• How would we simulate rolling dice?
• Modify this code to simulate rolling two dice

• Requirements
  • Generate values for two dice
  • Output values of each die
  • Call function `output` to calculate and output sum of dice

```python
import random

def output(value):
    print("Number=" + str(value))

if __name__ == '__main__':
    number = random.randint(1,6)
    output(number)
```
Selection/Conditionals: if...elif...else

```python
if BOOLEAN_CONDITION:
    CODE_BLOCK_A
elif BOOLEAN_CONDITION:
    CODE_BLOCK_B
else:
    CODE_BLOCK_C
```

```python
if __name__ == '__main__':
    num1 = 5
    if num1 == 5:
        print("The number is 5!")
    else:
        if num1 < 5:
            print("The number is less than 5!")
        else:
            print("The number is greater than 5!"))
```
Extending your program from WOTO 3

Simulate rolling two dice

- “Roll” two dice
- Results of the rolls sent to function named *sum*
  - Sum dice values
  - If sum is 7 or 11, then output “You win!”
  - Otherwise, output “Next time!”
Remember

• Work smarter, not harder
• Design first
• Try to identify where you are stuck
  • Identify resources to help solve problem
• Leverage your design and PythonTutor to understand program flow of control
