

## My Poem for CS 101

This class has taught me many tools,  
Splicing, splitting, and proving booleans.  
For loops help you iterate a list,  
They perform a function for each element: that's the gist!  
While loops do the same but when a condition is true,  
Press the red button to iterate through a few.  
But more importantly, I learned a few lessons for life,  
Do not give up when you are faced with strife,  
With a lot of effort, all your problems will pass,  
Go through the 7-steps and anything you can surpass.  
Thank you, Prof. Rodger and TAs for all that you did,  
With a lot of love, farewell I bid.
