2

Cynthia Rudin

- Duke CompSci Professor
 - Univ Buffalo, BS Mathematical Physics, BA Music Theory
 - Princeton, PhD.
- Works in interpretable machine learning, which is crucial for responsible and trustworthy AI
- Winner of Squirrel AI Award for AI for the Benefit of Humanity – 1 million
 - Detecting crime series
 - Con Edison NYC – underground electrical distribution network

She uses AI's power
to help society.

Announcements

- APT-4 due tonight
- APT-5 out, due March 24
- Assign 4 due Thursday, March 17
- No Lab Friday
- Have a great Spring Break!

3/3/22

CompSci 101, Spring 2022

4

PFTD

- Images
- Classes and Objects
- Tuples sprinkled about

3/3/22

CompSci 101, Spring 2022

5

Images

What is
photoshop?

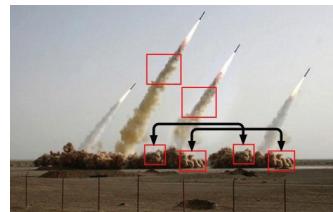

3/3/22

CompSci 101, Spring 2022

6

Image Processing

- Convert image into format for manipulating the image
 - Visualization, Sharpening, Restoration, Recognition, Measurement, more
 - Resizing, Red-eye Removal, more
 - CrashCourse: Navigating Digital Info
 - <http://bit.ly/dukecs101-cc-images>

3/3/22

CompSci 101, Spring 2022

7

Image Library

- PIL: Python Image Library -> Pillow
 - To install run the command below in a terminal
 - Terminal in PyCharm, not “Python Console”
 - `pip install Pillow`
 - If that doesn’t work try:
 - `Python3 -m pip install Pillow`
 - Library has extensive API, far more than we need
 - Concepts often apply to every image library
 - Realized in Python-specific code/functions

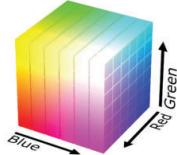

3/3/22

CompSci 101, Spring 2022

8

Color Models

- Cameras, Displays, Phones, JumboTron: RGB
 - Additive Color Model: Red, Green, Blue
 - https://en.wikipedia.org/wiki/RGB_color_model
- Contrast Printers and Print which use CMYK
 - Subtractive: Cyan, Magenta, Yellow, Key/Black

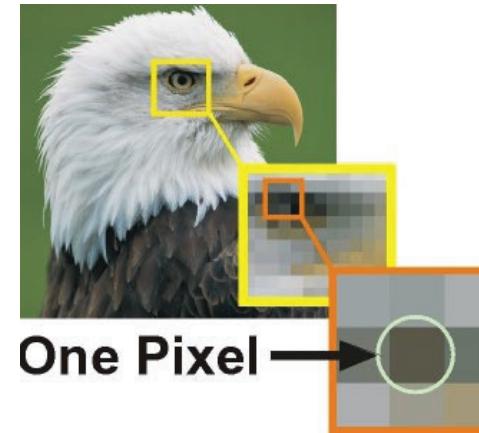

3/3/22

CompSci 101, Spring 2022

9

An image is made up of Pixels

- A pixel is a square of color

3/3/22

CompSci 101, Spring 2022

10

Images and Pixels

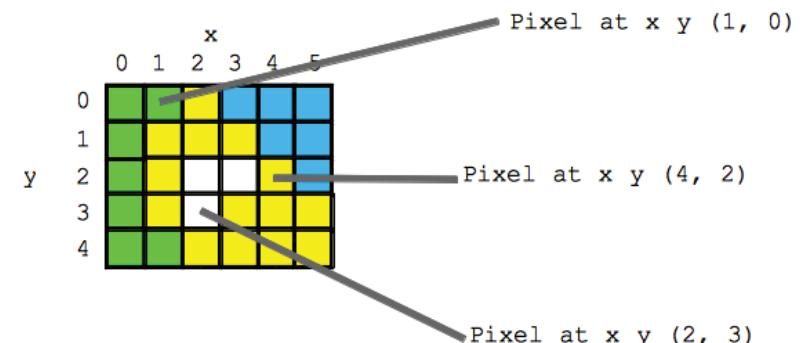

- Image is a collection of pixels
 - Organized in rows: # rows is image height
 - Each row has the same length: image width
- Pixels addressed by (x, y) coordinates
 - Upper-left (0,0), Lower-right (width-1,height-1)
 - Typically is a single (x, y) entity: tuple
- Remember: Tuple is immutable, indexed sequence
(a, b, c)

3/3/22

CompSci 101, Spring 2022

11

Each pixel has a location in Image

3/3/22

CompSci 101, Spring 2022

12

Each pixel has an RGB color

- Duke has three Duke blues
- Duke Athletics RGB: (0, 48, 145)
- Two for academics

BLUE (DUKE ATHLETICS)
PANTONE: PMS 287 C
HEX COLOR: #003087;
RGB: (0, 48, 135)
CMYK: (100, 75, 2, 18)
BUY MATCHING PAINT

DUKE ROYAL BLUE
HEX COLOR: #00539B
RGB: (0, 83, 155)
CMYK: (100, 53, 2, 16)

DUKE NAVY BLUE
HEX COLOR: #012169;
RGB: (1, 33, 105)
CMYK: (100, 85, 5, 22)

3/3/22

CompSci 101, Spring 2022 13

SimpleDisplay.py

- Access to PIL and Image module
 - What type is img?
 - <https://pillow.readthedocs.io/en/latest/>

```
6  from PIL import Image
7
8  if __name__ == '__main__':
9      img = Image.open("images/bluedevil.png")
10     #img = Image.open("images/eastereggs.jpg")
11     img.show()
12
13
```

3/3/22

CompSci 101, Spring 2022 14

String formatting with % operator

- Use formatted string with % in string to show where to put values
 - Followed by % and tuple of values
 - %d is for an int
 - %f is for a float
 - %.xf is to specify x digits past the decimal
 - %s is for a string or something that could be shown as a string

3/3/22

CompSci 101, Spring 2022 15

String Formatting Examples

```
name = "Xiao"
age = 19
print("%s is %d years old" % (name, age))
alist = [6, 7.8643, 2]
print("%f is a list %s" % (alist[1], alist))
print("fav in %s is %.2f" % (alist, alist[1]))
```

OUTPUT:

3/3/22

3/3/22

CompSci 101, Spring 2022 18

What is a class in Python?

- Class ≈ module ≈ library (for this CS101)
- Class – Also blueprint/Factory for creating objects
 - We've used int, float, str
 - `<class 'int'>, <class 'list'>`
 - Everything is a class in Python3
- Objects are created from a class
 - `x = [5, 6, 7]`
 - `b = "Moe"`
 - `c = "Charlotte"`

3/3/22

CompSci 101, Spring 2022 19

Types

```
print(type(6))
print(type([1,1]))
print(type('blue'))
print(type((6,[7])))

img = Image.open("images/bluedevil.png")
print(type(img))

img = Image.open("images/eastereggs.jpg")
print(type(img))
```

3/3/22

CompSci 101, Spring 2022 21

What is a class in Python?

- Use . dot notation to access object's innards
 - `word = "Hello"`
 - `word` is an **object** from the String class
- `word.lower()`
 - `.lower()` is a function, but don't call it that!
 - Function that goes with a class is called method
 - `.lower()` is a **method** from the String class
- `img.width` is an attribute aka field/property
 - Note there are no ()'s, like a variable

3/3/22

CompSci 101, Spring 2022 23

Image Library Basics

- Library can create/open images in different formats, e.g., .png, .jpg, .gif, ...
- Images have properties: width, height, type, color-model, and more (variables associated with class)
 - Functions and fields access these properties, e.g., **im.width**, **im.format**, and more
- Pixels are formed as triples (255,255,255), (r,g,b)
 - In Python these are tuples: immutable sequence

3/3/22

CompSci 101, Spring 2022 25

Types

```
img = Image.open("images/bluedevil.png")
print(type(img.format))
```

```
img = Image.open("images/eastereggs.jpg")
print(type(img.format))
```

WOTO-2 Classes

3/3/22

CompSci 101, Spring 2022 28

Demo: Convert Color to Gray

*Process each pixel
Convert to gray*

3/3/22

CompSci 101, Spring 2022 29

main

```
36 ► if __name__ == '__main__':
37     img = Image.open("images/eastereggs.jpg")
38     start = time.process_time()
39     gray_img = grayByPixel(img, True)
40     #gray_img = grayByData(img, True)
41     end = time.process_time()
42     img.show()
43     gray_img.show()
44     print("Time = %1.3f" % (end-start))
```

3/3/22

CompSci 101, Spring 2022 30

grayByPixel Function

```
13 def grayByPixel(img, debug=False):
14     width = img.width
15     height = img.height
16     new_img = img.copy()
17     if debug:
18         print("creating %d x %d image" % (width, height))
19     for x in range(width):
20         for y in range(height):
21             (r,g,b) = img.getpixel((x,y))
22             grays = getGray(r,g,b)
23             new_img.putpixel((x,y),grays)
24     return new_img
```

3/3/22

CompSci 101, Spring 2022 31

getGray function

```
12 def getGray(r,g,b):
13     gray = int(0.21*r + 0.71*g + 0.07*b)
14     return (gray,gray,gray)
```

3/3/22

CompSci 101, Spring 2022 32

WOTO-3 GrayScale <http://bit.ly/101s22-0303-3>

3/3/22

CompSci 101, Spring 2022 33

Make Gray: Notice the Tuples!

```
13 def grayByPixel(img, debug=False):
14     width = img.width
15     height = img.height
16     new_img = img.copy()
17     if debug:
18         print("creating %d x %d image" % (width, height))
19     for x in range(width):
20         for y in range(height):
21             (r,g,b) = img.getpixel((x,y))
22             grays = getGray(r,g,b)
23             new_img.putpixel((x,y),grays)
```

How does this code make a grey image?

New stuff here, what and where?

3/3/22

CompSci 101, Spring 2022

34

Make Gray cont.

```
13 def grayByPixel(img, debug=False):
14     width = img.width
15     height = img.height
16     new_img = img.copy()
17     if debug:
18         print("creating %d x %d image" % (width, height))
19     for x in range(width):
20         for y in range(height):
21             (r,g,b) = img.getpixel((x,y))
22             grays = getGray(r,g,b)
23             new_img.putpixel((x,y),grays)
```

Nested Loops

If stop code halfway,
what half of image is gray?

Tuple

Tuple

Tuple

How many parameters does putpixel have?

3/3/22

CompSci 101, Spring 2022

36

Revisiting nested Loops

- What is printed here? y varies first

- Value of x as inner loop iterates?

```
>>> for x in range(5):
...     for y in range(3):
...         print(x, y)
```

Why is the first column have the number repeated like that?
What if the print became:
`print(y, x)?`

0 0
0 1
0 2
1 0
1 1
1 2
2 0
2 1
2 2
3 0
3 1
3 2
4 0
4 1
4 2
...

3/3/22

CompSci 101, Spring 2022

35

Accessing Individual Pixels is Inefficient

- Accessing each one one-at-a-time is inefficient
 - Python can do better "under the hood"
- PIL provides a function `img.getdata()`
 - Returns list-like object for accessing all pixels
 - Similar to how file is a sequence of characters
 - Symmetry: `img.putdata(sequence)`

3/3/22

CompSci 101, Spring 2022

37

Processing all Pixels at Once

- Treat `img.getdata()` as list, it's not quite a list
 - Iterable: object use in “`for ... in ...`” loop

```
27 def grayByData(img, debug=False):
28     pixels = [getGray(r,g,b) for (r,g,b) in img.getdata()]
29     new_img = Image.new("RGB", img.size)
30     new_img.putdata(pixels)
```

Think: An image is 2D and `putdata(seq)` takes a 1D sequence. How did we get an image?

Hint: What type are the elements in the list comprehension?

Hint: What do we know about the length of that sequence and the sequence `putdata(...)` needs?

3/3/22

CompSci 101, Spring 2022 38

GrayByData

```
27 def grayByData(img, debug=False):
28     pixels = [getGray(r,g,b) for (r,g,b) in img.getdata()]
29     new_img = Image.new("RGB", img.size)
30     new_img.putdata(pixels)
31
32     if debug:
33         print("created %d x %d gray image" % (img.width,img.height))
34
35     return new_img
```

3/3/22

CompSci 101, Spring 2022 39

Summary of Image functions

- Many, many more
 - <http://bit.ly/pillow-image>

Image function/method	Purpose
<code>im.show()</code>	Display image on screen
<code>im.save ("foo.jpg")</code>	Save image with filename
<code>im.copy()</code>	Return copy of im
<code>im.getdata()</code>	Return iterable pixel sequence
<code>im.load()</code>	Return Pixel collection indexed by tuple (x,y)

3/3/22

CompSci 101, Spring 2022 40
