## The master Theorem

Let $a \geq 1$ and $b>1$ be constants, let $f(n)$ be a function, and let $T(n)$ be defined on the nonnegative integers by the recurrence

$$
T(n)=a T(n / b)+f(n),
$$

where we interpret $n / b$ to mean either $\lfloor n / b\rfloor$ or $\lceil n / b\rceil$. Then $T(n)$ can be bounded asymptotically as follows.

1. If $f(n)=O\left(n^{\log _{b} a-\epsilon}\right)$ for some constant $\epsilon>0$, then $T(n)=$ $\Theta\left(n^{\log _{b} a}\right)$.
2. If $f(n)=\Theta\left(n^{\log _{b} a}\right)$, then $T(n)=\Theta\left(n^{\log _{b} a} \lg n\right)$.
3. If $f(n)=\Omega\left(n^{\log _{b} a+\epsilon}\right)$ for some constant $\epsilon>0$, and if $a f(n / b) \leq c f(n)$ for some constant $c<1$ and all sufficiently large $n$, then $T(n)=\Theta(f(n))$.
