

In Griffith Theater we learn every other day,
While three WOTOs emerge on display.
Susan Rodgers & Co. lead the way,
Guiding us through the coursework fray.

We code in Python, day in and out,
Debugging APTs without a doubt.
Submitting assignments on Gradescope,
Praying for the autograder to give us hope.

But beware, students, take note of this,
Don't sit in the back 5 rows and dismiss.
Pay attention, engage with the class,
Lest you fall behind and fail to pass.

And speaking of learning, don't forget,
CleverWordGuess is a difficult and unsure bet.
Using Python to create a word game,
This challenge put our skills to fame.

Even Chat GPT has to yield,
To Prof. Susan Rodger's power in the field.
Her expertise and guidance will prevail,
Conquering AI and coding without fail.

Computer science is a journey long,
With challenges and triumphs strong.
Let's work together with TAs as our guide,
We'll master 101 and make it our pride.
