In the land of algorithms and code,
Where computer science reigns supreme,
There's a class that sets the foundation,
And it's called CS 101, it seems.

From binary digits to complex structures,
From loops to functions and arrays,
The course takes you on a journey,
Through the mysteries of computing ways.

You learn to think in logical steps,
To break down problems into parts,
To craft solutions with precision,
And to debug with all your heart.

The syntax can be daunting at first,
But with practice, it becomes clear,
And soon you're writing programs,
That can automate tasks with ease and cheer.

There are challenges along the way,
And sometimes errors that baffle the mind,
But with persistence and determination,
You'll find the solutions that are hard to find.

And when the course comes to an end,
You'll leave with a newfound skill,
A tool for solving real-world problems,
And a love for computing that's hard to kill.

So here's to CS 101, our guide and friend,
The foundation of our computer science dreams,
May we use what we've learned to change the world,
And create amazing things with machines.
