

The Little Green Square

Character by character, the code is typed in
Like it's a game, the goal is to win
For loops and while loops to go through the lines
The CS student tries... red squares appear... she whines.

Don't get frustrated, there's still time to go
You're doing great, you have more skills to show
Take number two and an if statement is tried
5 reds and 5 greens... getting better... we tied.

Time for a dictionary, name a value and key
Sort it with lambda, maybe an index of three?
Plug in some test cases and try one more time
One more little green square to go, I think this is a crime.

I found the mistake! It is a syntax error
I think this is it, now there's no more terror
Into the APT assignment grader to check
All green little squares.. I love being a woman in tech!
