

Susan Roger teaches CS 101,  
Each Tuesday and Thursday at 10:15,  
Her students gather 'round to learn and thrive,  
And leave each class with knowledge well alive.

They learn math operators, if statements too,  
While loops and strings, and how to join and split.  
Sorting skills are taught, both simple and key,  
And tuples used in code for great efficiency.

With dictionaries, they learn key/value pairs,  
And how to work with sets with skills that's rare.  
For loops and recursions, too, they master,  
And become coders that are faster and faster.

Assignments one to seven come so quick,  
Guessword, clever guessword, recommender,  
And create, the newest one in the mix,  
Each one a challenge with great adventure.

APTs due at midnight, they work hard,  
The timed quizzes, they give them their all.  
But when they pass, oh what a sight to behold,  
A green dance of joy, a feeling so bold.

Thanks to Susan Roger and her class,  
They'll become great coders, they'll surely surpass.  
Their knowledge grows with every single day,  
And in the end, they will be great, they'll say.
