Latanya Sweeney

PhD. Computer Science, MIT – first black woman Over 100 publications, Fellow ACMI

"I am a computer scientist with a long history of weaving technology and policy together to remove stakeholder barriers to technology adoption. My focus is on "computational policy" and I term myself a "computer (cross) policy" scientist. I have enjoyed success at creating technology that weaves with policy to resolve real-world technology-privacy clashes.

Exam 1 Collective Thoughts - Survey

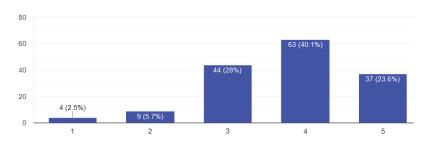

As you sat down to start the exam, how did you think you'd do on the exam?

157 responses

When you completed the exam, how do you think you did?

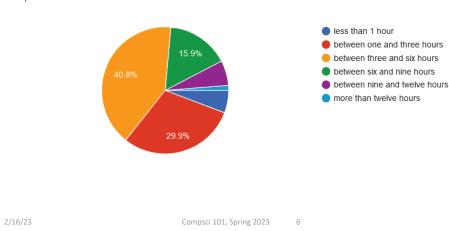

157 responses

Exam 1 Collective Thoughts - Survey

How much time did you spend preparing/studying for the exam outside of reading in the textbook, attending class and labs.

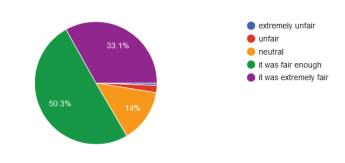

157 responses

Exam 1 Collective Thoughts - Survey

Was the exam fair in terms of the questions asked based on what was covered in class?

157 responses

Exam 1 Collective Thoughts - Survey

Sage has added new spots!

- Small groups of students working on additional problems related to CompSci 101
- ADDED MORE SPOTS
- SAGE Stem Advancement through Group Engagement
- See Ed Discussion Post (pinned at top) on how to sign up

Announcements

- APT-3 out, due Thurs. Feb 23
- Assignment 2 program due tonight
 - Do have one grace day
- Do prelab before going to Lab on Friday
- APT Quiz 1 coming ... 2/23-2/27
 - APTs you take by yourself during this period
 - Take online, timed, there are two parts
 - Each part has two problems
 - APT practice quiz is up today, optional (old problems)
- There will be one more APT Quiz

2/16/23 Compsci 101, Spring 2023 10

PFTD

- Files and Data
- While loops and Collatz sequence
- Bagel APT

Review - Last Time on Files

Open and Close file

```
f = open(fname)
do stuff with file
f.close()
```

Read line by line

```
for line in f:
   do something with line
```

 OR Read file into list of strings – one string for each line listLines = f.readlines()

Compsci 101, Spring 2023 13

Text File Processing Pattern

- See module FileStuff.py
 - If newline '\n' is read, call .strip()
 - If want to break line into "words", call .split()
- Process the list that is returned by .split()
 - May need to convert strings to int or float or ...
- The for line in f: pattern is efficient
 - Contrast list returned by f.readlines()

Review - Last Time on Files

Open and Close file

```
f = open(fname)
do stuff with file
f.close()
```

· Read line by line

OR Read file into list of strings – one string for each line

Compsci 101, Spring 2023 14

FileStuff.py: avgWord

```
def avgWord(fname):
    f = open(fname,encoding="utf-8")
    totalWords = 0
    totallen = 0
    for line in f:
        line = line.strip() #remove newline
        data = line.split()
        for word in data:
             totalWords = totalWords + 1
             totalLen = totalLen + len(word)
    f.close()
    return totalLen/totalWords
2/16/23
                       Compsci 101, Spring 2023
```

FileStuff.py: avgWord

```
def avgWord(fname):
    f = open(fname,encoding="utf-8")
    totalWords = 0
                                      Line is a string, one line
                                           from the file
    totalLen = 0
    for line in f:
         line = line.strip() #remove newline
         data = line.split() -
                                              data is a list of
                                              words from line
         for word in data:
             totalWords = totalWords + 1
             totalLen = totalLen + len(word)
    f.close()
    return totalLen/totalWords
2/16/23
                       Compsci 101, Spring 2023 17
```

Files - Summary

- Open file: f = open(filename)
- "Process" file (2 different ways):
 - for line in f: # get one line at a time with "\n"
 - x = f.readlines() # x is a list of lines with "\n"
- Close file: f.close()
- To think about when processing lines
 - Line is a string with "\n" .strip() it
 - Maybe .split() line into list of strings (words)?
 - Convert string to int or float int("376")

Run FileStuff

Output:

```
poe.txt 4.601549053356282

confucius.txt 4.398126192817072

kjv10.txt 4.245566037162798

oz.txt 4.496446700507614

species.txt 5.036
```

2/16/23

Compsci 101, Spring 2023 18

When is a game of chess over?

- If you were to write a program to play chess
 - how many rounds in a game?

2/16/23 Compsci 101, Spring 2023 19 2/16/23 Compsci 101, Spring 2023 2

Another type of loop: While loop

- Repetition when you stop a loop based on a condition
- while CONDITION:
 BODY
 - As long as condition is true, keep executing loop body.
 - Must have an update in the body to get closer to condition being false

condition body

16/23 Compsci 101, Spring 2023 21

Example: while

Playing chess

while (game not over)

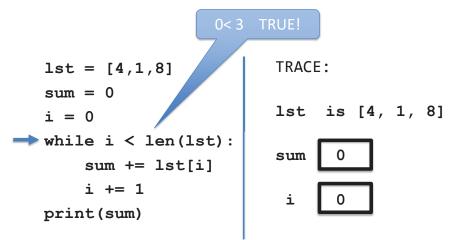

make a move in the game

(game must get closer to ending)

2/16/23 Compsci 101, Spring 2023 22

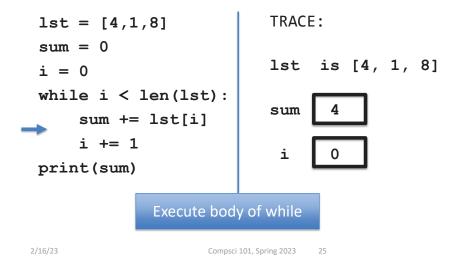

Example: while loop – sum list

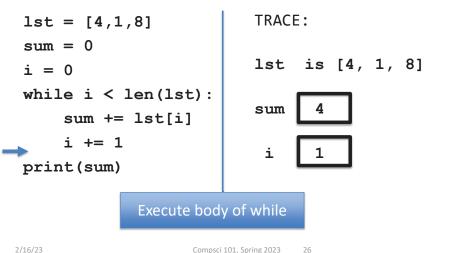

Example: while loop – sum list

Example: while loop – sum list

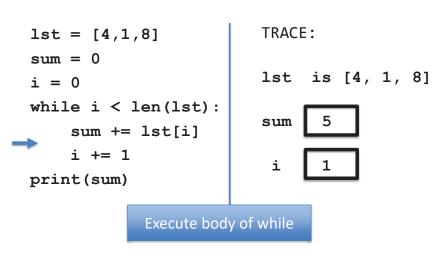

Example: while loop – sum list

Example: while loop – sum list

Example: while loop – sum list

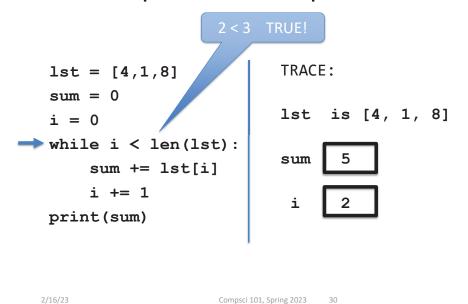

2/16/23

Example: while loop – sum list

lst = [4,1,8]TRACE: sum = 0lst is [4, 1, 8] i = 0while i < len(lst): sum sum += lst[i] i += 1 i print(sum) Execute body of while Compsci 101, Spring 2023

Example: while loop – sum list

Example: while loop – sum list

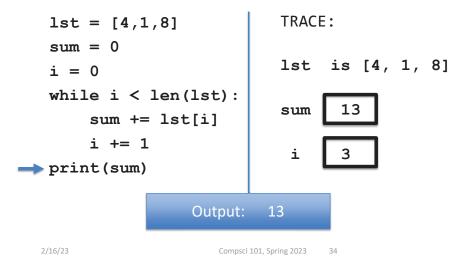

TRACE: lst = [4,1,8]sum = 0lst is [4, 1, 8] i = 0while i < len(lst): sum 13 sum += lst[i] i += 1i print(sum) Execute body of while

Example: while loop – sum list

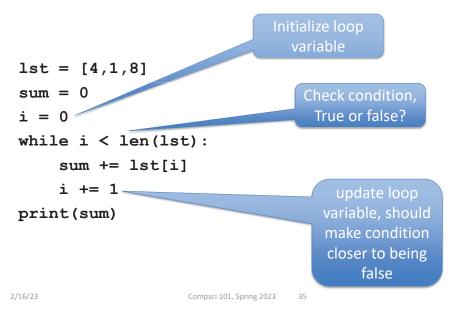

Example: while loop – sum list

1st = [4,1,8] sum = 0 i = 0 while i < len(lst): sum += lst[i] i += 1 print(sum)</pre> TRACE: sum 13 i 3 2/16/23 Compsci 101, Spring 2023 33

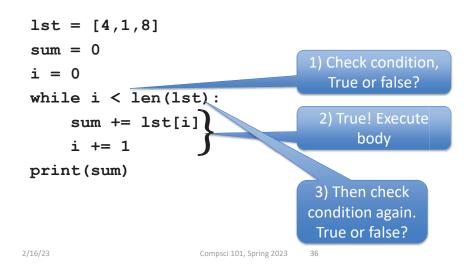

Example: while loop – sum list

Summary: while loop

Summary: while loop

Summary: while loop

lst = [4,1,8] sum = 0 i = 0 while i < len(lst): sum += lst[i] i += 1 print(sum) 1) Check condition, True or false? 2) False! Loop is over, go to statement following loop</pre>

History: From while to for loops

```
while loop (sum list)
lst = [4,1,8]
sum = 0
i = 0
while i < len(lst):
    sum += lst[i]
print(sum)

for loop (sum list)
lst = [4,1,8]
sum = 0
for n in lst:
    sum += n
print(sum)</pre>
```

2/16/23

16/23 Compsci 101, Spring 2023 37

Alternative while -while True

```
initialize
while True:
    if something:
        break
    if something2:
        update
    update
Continue or return
```

Alternative while -while True

Compsci 101, Spring 2023

```
while true, looks like infinite loop

while True:

if something:
break
break
break
- Break exits the loop

if something2:

update
update
Still need to update to get closer to exiting loop

Continue or return
```

2/16/23 Compsci 101, Spring 2023 39 2/16/23 Compsci 101, Spring 2023 40

while condition vs while True

while condition: while True:

body body

continue if condition:

break

continue

While condition is true - must update

- must get closer to making condition false
- use break to exit

2/16/23 Compsci 101, Spring 2023 41

Compare: while - while True

```
lst = [4,1,8]
                        lst = [4,1,8]
sum = 0
                        sum = 0
i = 0
                        i = 0
while i < len(lst):
                        while True:
    sum += st[i]
                             if i \ge len(lst):
    i += 1
                                  break
               Conditions are
print(sum)
                             sum += lst[i]
                opposites!
                             i += 1
                        print(sum)
```

Compare: while - while True

```
lst = [4,1,8]
                       lst = [4,1,8]
sum = 0
                        sum = 0
i = 0
                       i = 0
while i < len(lst):
                       while True:
    sum += lst[i]
                            if i \ge len(lst):
    i += 1
                                 break
print(sum)
                            sum += lst[i]
                            i += 1
                       print(sum)
```

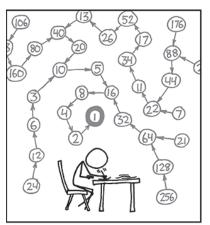

2/16/23 Compsci 101, Spring 2023 42

WOTO-1 While loops http://bit.ly/101s23-0216-1

2/16/23 Compsci 101, Spring 2023 43 2/16/23 Compsci 101, Spring 2023 44

Now let's see a problem that needs a while loop

https://xkcd.com/710/

THE COLLATZ CONJECTURE STATES THAT IF YOU PICK A NUMBER, AND IF IT'S EVEN DIVIDE IT BY TWO AND IF IT'S ODD MULTIPLY IF BY THREE AND ADD ONE, AND YOU REPEAT THIS PROCEDURE LONG ENOUGH, EVENTUALLY YOUR FRIENDS WILL STOP CAULING TO SEE IF YOU WANT TO HANG OUT.

Collatz Conjecture (Hailstone)

If number is even
divide by 2
If number is odd
multiply by 3 and add 1

Always end up at 1!

6/23 Compsci 101, Spring 2023 45

Why Solve This? In Python?

- https://en.wikipedia.org/wiki/Collatz conjecture
- · We want to illustrate an indefinite loop
 - One of many mathematical sequences, but ...
- There's an XKCD comic about it!
 - Not everyone enjoys XKCD, but ...
- Mathematics is foundational in computer science, but
 - Not everyone enjoys logic/math puzzles, but ...

Developing and Reasoning about While Loops

Compsci 101, Spring 2023

- Don't know: how many times loop executes
 - a priori knowledge, we'll know afterword
- Do know: condition that should be true after loop
 - Its negation is the expression for BOOL_CONDITION (loop guard)

```
while BOOL_CONDITION:
    LOOP_BODY
    # modify variables, affect expression
```

2/16/23 Compsci 101, Spring 2023 47 2/16/23 Compsci 101, Spring 2023 47

Concrete Example: Collatz/Hailstone

- Don't know: how many times loop executes
 - some numbers: long sequences, others short
- Do know: condition that should be true after loop
 - It's negation is the expression for loop guard!
 - What is true after loop below finishes?

```
while value != 1:
    loop body
    # modify value somehow
```

Compsci 101, Spring 2023

Collatz Code

```
def hailstone(start, printing=False):
          ....
7
14
          steps = 0
15
          current = start
16
          while current != 1:
17
              if printing:
18
                  print("{:3d}\t{:6d}".format(steps,current))
19
              if current % 2 == 0:
20
                  current //= 2
21
              else:
22
                  current = current * 3 + 1
23
              steps += 1
24
25
          if printing:
26
              print("{:3d}\t{:6d}".format(steps,current))
27
          return steps
```

Collatz Code

```
What is new in this
      def hailstone(start, printing=False):
          .......
7
                                                 code? What does
14
         steps = 0
                                                 that new stuff do?
15
         current = start
16
         while current != 1:
17
             if printing:
18
                 print("{:3d}\t{:6d}".format(steps,current))
19
             if current % 2 == 0:
                 current //= 2
20
                                                 What is this code
21
             else:
                                                 doing? What gets
22
                 current = current * 3 + 1
                                                updated? Is the loop
23
             steps += 1
                                                quaranteed to stop?
24
25
         if printing:
26
              print("{:3d}\t{:6d}".format(steps,current))
27
         return steps
                            Compsci 101, Spring 2023
```

```

Collatz Data – Average no. of steps

- How do we gather data for numbers <= 10,000?
 - In general for numbers in range(low,high)?
 - Call function, store result, store 10,000 results?
- We'd like counts[k] to be length of sequence for k
 - How do we allocate 10,000 list elements?
 - Like there is "hello" * 3
 - There is [0] * 10000

Think: Analysis in Collatz.py

Compsci 101, Spring 2023

```
Why do both range
       def analyze(limit):
29
                                               calls have +1?
30

APT Bagels

- How figure out how many bagels needed?
 - 7-steps!

APT: Bagel Counting

Problem Statement

You are in charge of web-based orders for your neighborhood bagel store, *The Bagel Byte*. Each evening you must total the orders to be picked up the next day. Some orders are simply for *N* bagels, but each order of a dozen or more bagels is topped off with an extra bagel, the so-called "baker's dozen". This means, for example, that an order for 25 bagels actually

```
filename: Bagels.py

def bagelCount(orders):
    """
    return number of bagels needed to fulfill
    the orders in integer list parameter orders
    """

# you write code here
```

requires 27 bagels to fulfill since there are two extra bagels needed for each dozen in the order. An order for 11 bagels doesn't require any extra since it's for less than a dozen.

Given a list of integers representing bagel orders determine the number of bagels needed to fulfill all the orders.

Examples

Step 1 and 2

Step 1: Solve an instance (think)

• orders = [11, 3, 24, 17]

Examples

```
1. orders = [1,3,5,7]
   Returns: 16
```

No order is for more than a dozen, return the total of all orders.

2/16/23

2/16/23

Compsci 101, Spring 2023 66

Step 1 and 2

- Step 1: Solve an instance (think)
 - orders = [11, 3, 24, 17]
 - 11 + 3 + (24+2) + (17+1) = 58
 - Total: 58
- Step 2: What did we do?
 - Write down in words

WOTO-3 Step 3: Generalize http://bit.ly/101s23-0216-3
