

# **A Computer Vision Sampler**

## **COMPSCI 527**

Today:

- Introduction to computer vision
- Course logistics

# One Image, Many Questions

# Recognition and Re-Identification

Apple Computers 2010

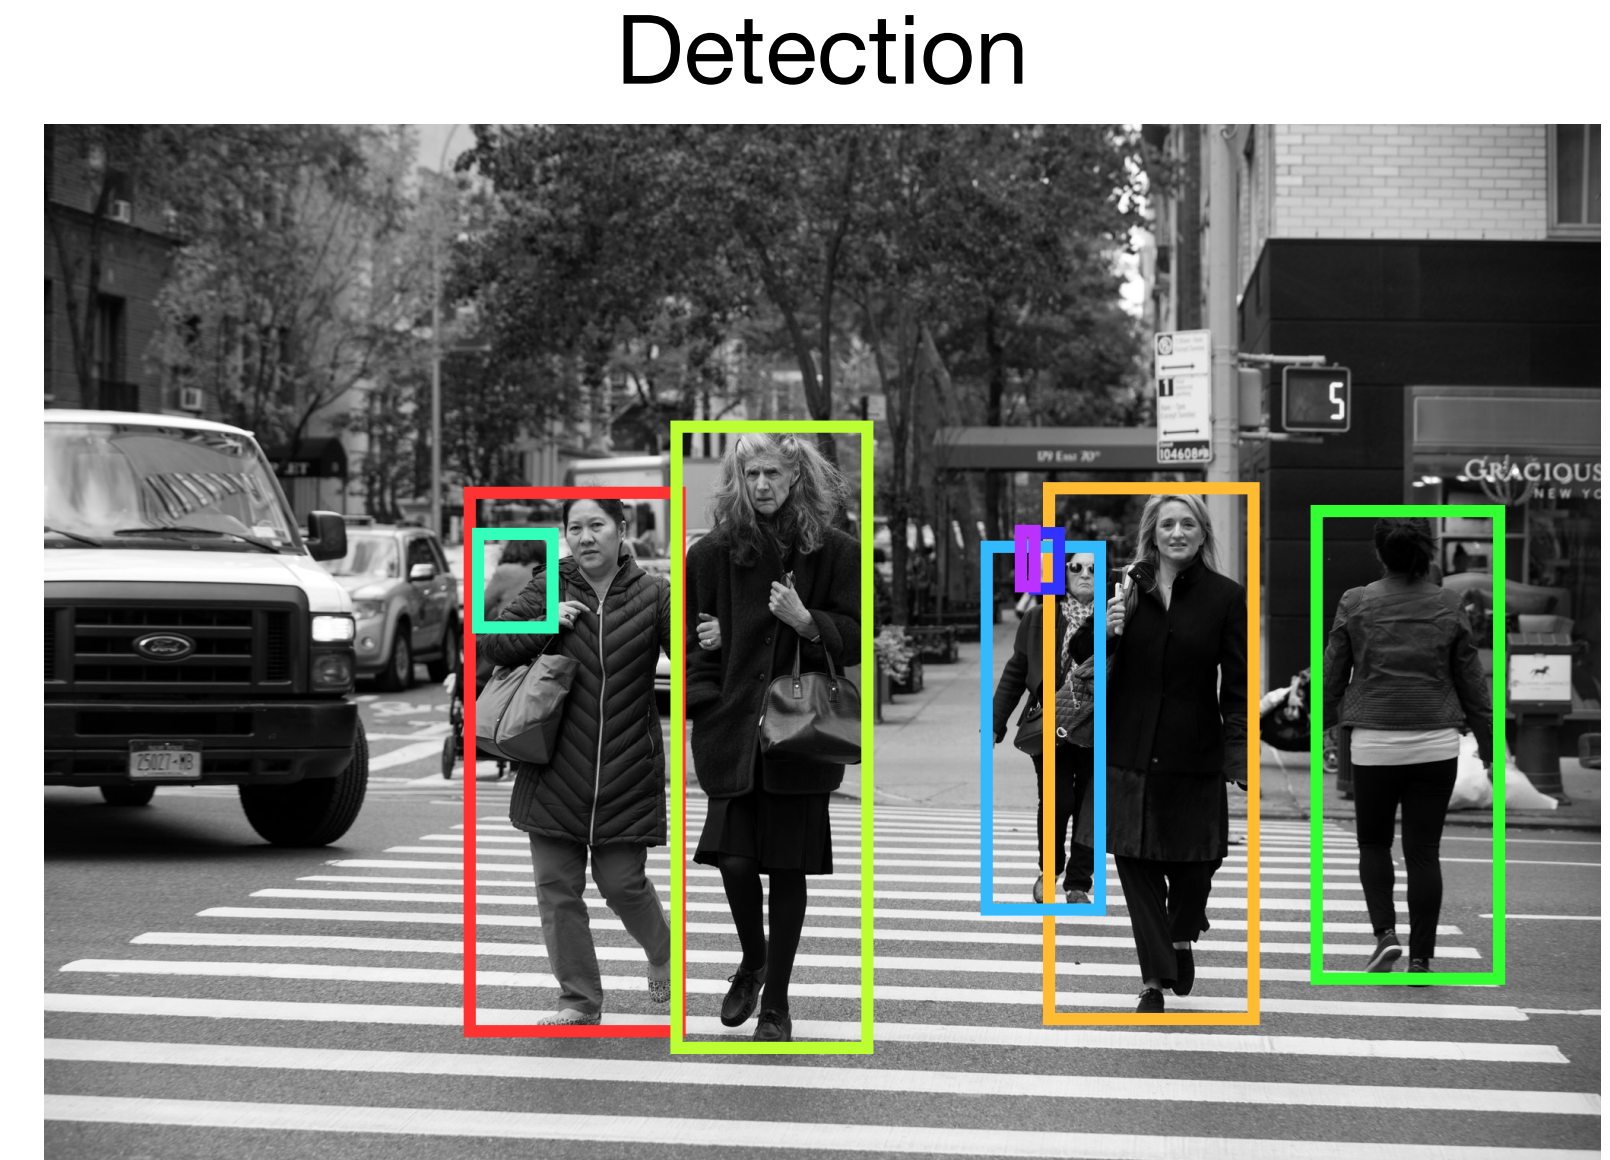

- Recognition: Who is this? What does this image depict (face, pedestrian crossing)?
- Re-Identification: Are these two people the same?
- Also recognize activities in video (“crossing” now becomes a verb)

# What does “Recognition” Mean Anyway?

# Detection and Segmentation

- Detection: Find instances of class  $x$
- Class-Level Segmentation: Which pixels belong to class  $x$ ?
- Instance-Level Segmentation: Which pixels belong to each instance of class  $x$ ?

# Tracking

Across two or more video frames

# 3D Reconstruction

## From two or more images

# Appearance is Tricky

# Appearance is Tricky

# Images are Cluttered

**Logistics**

# Academic Integrity

- *Short version: Cheating will be prosecuted*
- Cheating: Using someone else's material or help in your work without giving credit [Lone exception: class materials need not be cited]
- Ditto for making materials available to others
- Giver/receiver are treated the same
- Format for using/making available is immaterial
- Only communication allowed during homework is with your group peers, if any, and with the teaching staff

# Videos and Notes

- Prerecorded videos on the Syllabus page are compact versions of the lectures. They are *not* required
- In-person lectures will be recorded on Panopto (access from Sakai)
- ***Notes on the class Syllabus web page are required reading, and are your main source of information along with homework and sample solutions***
- ***Slides are lecture props, NOT study materials***
- ***All appendices in the notes are optional reading***
- Feel free to integrate with other sources. See *Resources* web page

# Homework

- Homework 0 is on prerequisites and is due before the add/drop deadline
- ~5 assignments after homework 0
- Some math, some text, some programming
- OK to work in groups of one, two, three [but no division of labor!]
- Jupyter notebooks → HTML → PDF
- Two submissions on Gradescope: PDF, Notebook
- **One pair of submissions per group, remember to list all names!**
- **No late homework accepted** (would be unfair to your peers)
- Worst homework score (including 0 for no homework) is dropped

# Exams and Grades

- Exams:
  - One midterm on March 9, in person (just before spring break)
  - One final on May 5, 2-4 PM, in person, not cumulative (two hours, not three)
  - Closed book, closed notes
- Grades:
  - Homework: 50% (lowest homework score dropped)
  - Exams: 47% ( $0.7 \max(\text{Midterm}, \text{Final}) + 0.3 \min(\text{Midterm}, \text{Final})$ )
  - Class attendance: 2%
  - Class evaluation: 1%

# Attendance

- Two points out of 100 are for attendance
- Download the app at <https://arkaive.com>
- Enroll with code KBB2
- Check in within 30 minutes and up to 10 minutes early
  - $\geq 20$  credits: 2 points
  - $10 \leq \text{credits} \leq 19$ : 1 point
  - $< 10$  credits: 0 points
- I update credits on Sakai about once a month

# Programming

- All programming will be in **Python 3**
- If you know how to program, picking up Python takes a few hours and Google while you program
- If you don't know how to program, this class may not be for you
- You will write **Jupyter Notebooks** for homework. They are easy to get used to, and let you intersperse text, math, figures, and code
- A first homework assignment will help you ease into these tools
- The **Anaconda** distribution for everything you need is very strongly recommended
- **Program and debug in PyCharm (see resources), not Jupyter!**
- See the *Resources* web page for tutorials on Python 3, Jupyter, Anaconda
- Specific instructions also given in homework 0

# Teaching Staff

- *Graduate TAs:* Yuqi Wang, Jonathan Donnelly
- *Undergraduate TAs:* Aakash Kothapally, Aining Liu, Aqib Mahfuz, Frank Willard, Louis Hu, Matthew Giglio, Nicholas Talati
- If you like this course, please volunteer to TA next year!
- Each of us will have office hours each week, either in person or on Zoom
- **Check the online calendar before attending office hours**
- We'll keep listening to Ed STEM (at reasonable hours)
- **Talk to us!** We are here to help you learn
